

coding to kids. Creativebug is an arts and crafts site that teaches kids, well, arts and crafts. Then there's Khan Academy, which covers a massive range of topics across various different subjects. Most of these sites also have apps of their own for mobile.

Speaking of apps, everyone in India is probably familiar with BYJU'S Learning App by now as well, which is also a great learning resource. Then there's LingoKids which is great for learning English in an interactive gamified manner. Phonics is an app that teaches kids how to read phonetically. Then there are apps like ScratchJr which teaches kids how to code while making games and interactive stories. There's Lightbot which introduces children to coding in the form of puzzles. For advanced, or older kids, there's SoloLearn, again for coding. Coursera offers a variety of University level courses, although, we're guessing if you're at that level you probably don't need babysitting.

Of course, you're not restricted to only learning school material, you can always explore and try and learn different things. A new instrument or even a language for example, to that end, Duolingo is a great app to get you started on learning a new language.

READ MORE

Being stuck at home is a great time to pick up and read a few books, it doesn't all have to be related to studies. This of course applies to everyone, not just kids. Reading is a great hobby to have and it's easier than ever to get into books. If you have an eReader at home, like the Amazon Kindle for example, you have a massive

selection of ebooks to choose from, with lots of options for kids as well.

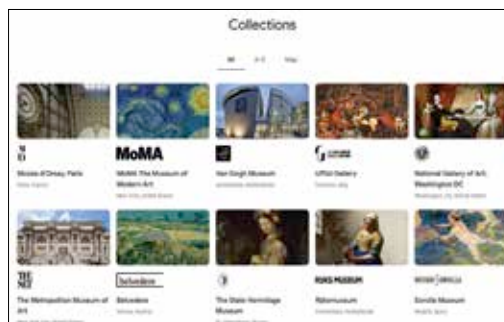

Another thing you could try out is audiobooks. Audiobooks are akin to story time for kids, and most kids' audio books come accompanied with great voice acting. A good source for audio-books is Audible.

If you've got home voice assistants such as Alexa or Google Home, they can also keep your kids entertained with stories and as a plus, your kids can interact directly with them and ask them questions if they get curious.

ALL WORK AND NO PLAY MAKES JACK A DULL BOY

While learning is definitely important, so is having fun. Fun might be difficult for some kids, considering they can't leave the house. And while it's alright to leave kids to their own elements, it's definitely a good idea to take some time out of your day and spend time with your kids. This is a great time to find a new hobby together and discover fun activities you can do together. This could be something as simple as playing board games. However, we know that not everyone might have board games at home. Fortunately, you've all got phones, and many board games now have app versions that you can play. All the fun without the physical parts or touching!

Another thing you could do together is learn an instrument, or even learn to cook. There's no shortage of tutorial videos online that you can watch with your kids to start the learning process.

For the more curious kids, Google Arts and Culture offers plenty of virtual tours of museums and archives for you to explore with your children.

Of course, there's still conventional forms of entertainment, such as

YouTube, Netflix and other streaming services. You could always watch a show together. Or, taking it a step further, even play a video game together. You never know, Minecraft might be your next big addiction.

STAYING IN TOUCH

Being stuck at home means that kids won't be in touch with their friends for a while. Thankfully, we've got the technology to make sure they stay in touch with their pals. Services like WhatsApp, Skype and even Discord making it easy to stay in touch, regardless of distance. You can even add fun to the socialising, be it through social games they can play together, or even through browser extensions, like Netflix Party on Google Chrome for example, through which a group of friends can watch a show together.

KEEPING FIT

Being unable to go outdoors means kids are just loafing around at home. Fortunately, if you've got a Nintendo Wii, or Nintendo Switch at home, you can actually get them to workout. An hour on the Wii or the Ring Fit for Switch should be enough of a daily workout for not only them, even you're free to accompany them.

If you haven't got a motion-controlled console at home, no problem, simple exercises and stretches are more than enough. There are apps with exercises targeted at kids as well, like NB Fit. If not apps, you can always head to YouTube for a kid-friendly workout sesh. One channel you can check out on YouTube is Little Sports.

EVERYTHING IN MODERATION

This is important, time should be kept in mind, both for fun activities and even for learning. Kids will get used to a schedule when it's followed regularly. They will know when it's time to watch something and when they're allowed to play games. Similarly, they will also know when it's time to learn. As the parent, it's up to you to make sure that they don't spend too much time playing video games, browsing the internet or watching videos on YouTube. In today's day and age, it's unreasonable to restrict screen time too much, your responsibility lies in monitoring the content they're absorbing.
