Sale of .Org registry stalled

ICANN has delayed the decision to allow the sale of the organisation that controls .org domain registrations, ISOC, to a private entity after the California General Attorney's office issued a warning. The controversial sale announcement by ICANN isn't the first. It removed price caps for .org registrations last year.

WHAT'S NEW

YouTube to ban medical advice that contradicts WHO

In an interview with CNN, YouTube CEO Susan Wojcicki said that YouTube will be removing videos with medical advice that contradicts WHO recommendations. Susan said, "So people saying 'take vitamin C; take turmeric, we'll cure you', those are the examples of things that would be a violation of our policy". This is a welcome move considering that there has been a surge of conspiracy theories linking 5G infrastructure to Covid-19 on all platforms including YouTube. YouTube had announced that it would be enacting a blanket ban on any videos covering the conspiracy theory. Subsequently, this

led to a wave of complaints alleging censorship by the technology giant. There is concern over how YouTube is going to

implement this new policy considering that YouTube did not mention what new measures would be taken to equip their content moderation team to make objective judgements. So far, there have been no indications that the YouTube content moderation team consists of medical experts.

Intel launches 10th Gen Core (Comet Lake-S) desktop processors

Intel unveiled the 10th Gen Core series desktop processor lineup with higher core counts. The top of the line SKUs will now have 10 cores and a maximum clock speed of 5.3 GHz. Code named Comet Lake-S, these processors will continue to use Intel's 14nm process and could be the last generation of mainstream desktop processors to use the 14nm process. Hyper-Threading

can now be disabled on a per-core basis, the DMI bus can be overclocked and Intel's existing Extreme Tuning Utility will now have more voltage/frequency curve controls. Another change

is that the die has been made thinner and the Integrated Heat Sink has been made thicker. According to Intel, this will make it easier to manage thermals. The entire lineup consists of Intel Core processors as well as Pentium and Celeron SKUs. The overall platform is still using PCIe 3.0 and will use the new Intel 400 series platform.

Apple unveils iPhone SE 2020

Apple has unveiled what could be one of the best devices to come from Apple's stables in recent years in the form of the iPhone SE 2020. Starting at ₹42,500, the SE 2020 takes most of the iPhone 11 hardware including the A13 Bionic processor and merges that with the iPhone 8 body.
