

Redmi K30 Pro = POCO F2 Pro?

A Google Play listing suggests that the Redmi K30 Pro might be rebranded as the POCO F2 Pro in India. <https://digit.in/may20-33>

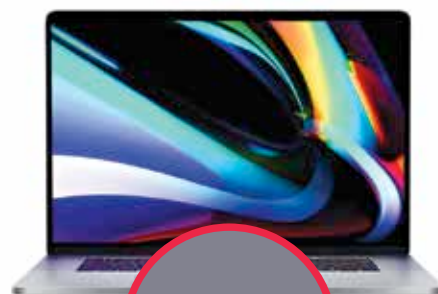

Telegram announce video calls

In addition to implementing video calls soon, the company announced that it gets 400 million monthly users. <https://digit.in/may20-34>

Stache-shaped logic board

The oddly-shaped motherboard features the 9th-gen Intel Core i7-9750H 6-core processor, 16GB Micron DDR4 SDRAM, AMD Radeon Pro 5300M GPU, 4GB Samsung GDDR6 RAM, two Toshiba flash storages, an Apple T2 coprocessor and an Intel Thunderbolt 3 controller. On the flip side, you can have a few more chips including the Intel platform controller hub.

MacBook Pro 16" 2019

The speaker, mic array and battery

The MacBook Pro 16" features brand-new speakers with extended enclosures and woofers. The woofers are opposed to one another and cancel each other's vibration out. The new MacBook also comes with a three-mic array which is similar to the one in the 2018 MacBook Air, however, these look a bit bigger, which could mean they are higher quality. Additionally, the MacBook is powered by a massive 99.8 Wh battery which is the largest battery ever in a MacBook.

Keyboard still fixed in place

The keyboard's backlight assembly features a flexible diffuser which carries the LEDs' light along the edges. Once the backlight is carefully peeled away, you will spot a few Pentalobe P2 screws. Despite this, the keyboard assembly is still fixed in place making it hard to repair. Upon prying further, you can look at a flexible PCB layer that is tucked between the key and the metal backplate.
