

Microsoft Teams called Teams Virtual Consult. This feature allows patients to get the care they require right from the comfort of their homes.

This virtual consultation service is powered by Microsoft Teams. Using this, doctors can schedule, manage, and conduct virtual visits with patients, including but not limited to more serious things such as post-surgery follow-ups. On the patient's end, they can schedule virtual appointments through the HCG website or through the Teams app which is available for free. Once a visit is booked, the patient will receive a confirmation email with details about the appointment and a link for where they can join the virtual appointment either via their browser or through the Teams app. Patients can continue to interact with their doctors via video call, voice or text to continue their treatment thereafter. Via Teams, patients and medical personnel will also be able to share important documents such as prescriptions, images, etc.

cally sends out alerts based on a care plan to regularly monitor their vitals. For those who require testing, the system initiates referrals to designated test labs and hospitals, reducing the overall burden on hospitals and providing instant access to healthcare for those in need.

Microsoft is also helping pharmaceutical companies and their partners maintain medical and critical supply lines and ensure they keep running. Dr Reddy's Laboratories has enabled work from home for their employees using MS Teams to collaborate and work with colleagues and customers effectively. Intas Pharmaceuticals, a leading Ahmedabad-based drug manufacturer, is using the Office 365 collaboration platform to keep track of its supplies.

Microsoft has also helped the Government of Punjab roll out COVA, a citizen app that offers real-time updates on the COVID-19 situation in addition to authentic information. This includes best practices, preventive measures,

COVID-19 is Mumbai-based startup Gaia Smart Cities, which has built a platform on Azure. The platform includes an app that lets citizens provide information about their health situation and whether or not they're suffering from any symptoms. The app has been deployed by the Agra Smart City and Agra Nagar Nigam to help city administrators track responses and take preventive action. The collected data is also used to provide real-time reports, allowing authorities to monitor trends across the city.

URBAN COMPANY

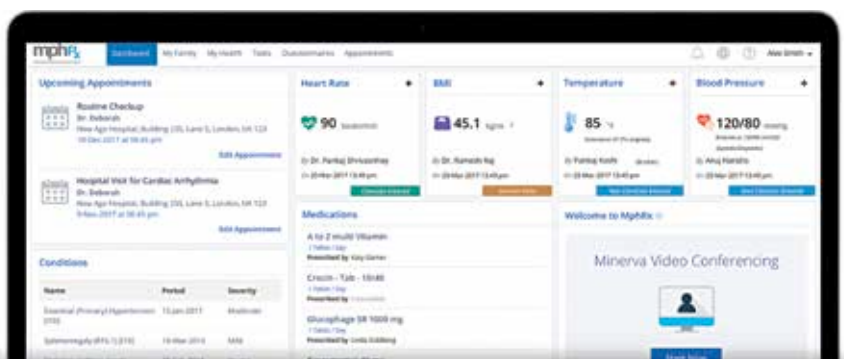

Urban Company, formerly Urban Clap, have launched a disinfection service in various cities across India to help combat the spread of COVID-19. The cities currently include Delhi, Mumbai, Bengaluru, Hyderabad, Chennai and Pune with plans to soon launch the service in Kolkata, Ahmedabad, and more by the end of April.

Disinfection will be done using the Virex 256 chemical which has reportedly been proven to kill disease-causing viruses, including coronavirus. Additionally, it also kills harmful bacteria and fungi. Virex 256 is also approved by the Environmental Protection Agency (EPA). The service will also ensure sanitisation of high-frequency touch points, such as doors knobs, handles, switchboards, taps etc.

Urban Company added that the disinfection services will be provided by well-trained and equipped professionals who have been officially permitted by local authorities. Service partners will be in full-body protective suits to ensure the safety of themselves and customers.

PAYTM

Founder and CEO of Paytm, Vijay Shekar Sharma has pledged ₹5 crore for any medical innovation related to COVID-19. Paytm has also launched an 'India Fights Corona' campaign in partnership with Hindustan Unilever's Lifebuoy and Yuvraj Singh's YouWeCan Foundation. Additionally, the company also plans to distribute one million soaps to those affected by the pandemic. **A**

MphRx monitoring dashboard

Screening a large number of patients who show symptoms can easily become a bottleneck for medical facilities and overwhelm health systems that are trying to keep up with the influx of cases. This is where MphRx comes in, one of Microsoft's partners, which has customised their digital healthcare platform Minerva for an online COVID-19 triaging workflow. The solution is helpful when it comes to assessing symptoms and then automatically screening responses. It then creates a worklist for care coordinators who can set up teleconsultations for patients who show symptoms. For those patients who have been advised to self-quarantine, Minerva automati-

cally sends out alerts based on a care plan to regularly monitor their vitals. For those who require testing, the system initiates referrals to designated test labs and hospitals, reducing the overall burden on hospitals and providing instant access to healthcare for those in need. The app has been developed by the Department of Government Reforms on Microsoft Azure in consultation with the Health and Family Welfare Department. COVA has two bots integrated into it, an AI-powered Q&A bot that is designed to answer citizen queries quickly and a bot that helps citizens conduct self-assessment using guidelines set by the WHO and the MoHFW, Government of India.
