

Coffee can change DNA?

Drinking coffee may somehow change the way some of our genes are expressed. <https://digit.in/may2020>

Painting 3D-printed objects

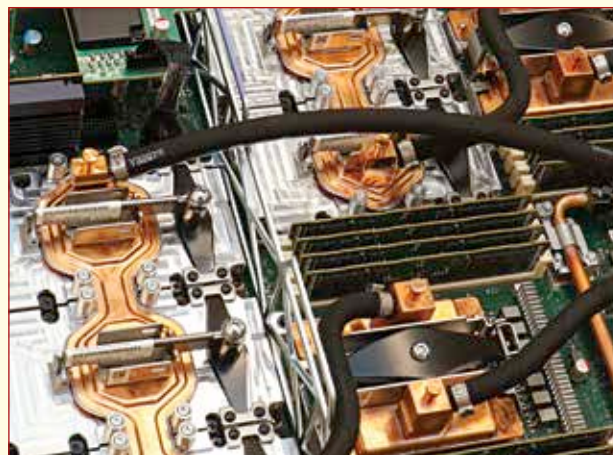

Rutgers engineers have created a highly effective way to paint complex 3D-printed objects. <https://digit.in/may2020>

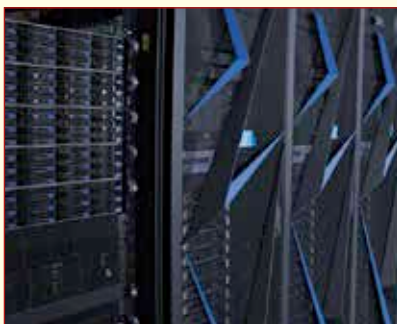

Peak performance

These are the fastest supercomputers in the world, that are not distributed projects. Manufacturers include IBM, Cray, Dell, Fujitsu, and Lenovo.

↑ **Summit:** Summit, built by IBM and installed at the Oak Ridge National Laboratory is the fastest supercomputer in the world with 200 petaFLOPS of computing power. Summit is used mostly for cosmology research, and other civilian science.

← **Sierra:** Sierra, like Summit was sponsored by the US department of energy, and is housed at the Lawrence Livermore National Laboratory. The computer is used to research nuclear weapons.

← **Frontera:** The Frontera is housed at the University of Texas, and is the most powerful computer of any University in the world. Currently, Frontera is researching the coronavirus.

← **Sunway TaihuLight:** The Sunway TaihuLight is a Chinese supercomputer, located at the National Supercomputing Center in Wuxi. It uses chinese designed processors based on the Sunway architecture.

← **Piz Daint:** Located at the Swiss National Supercomputing Centre, the Piz Daint is a 28 cabinet Cray XC30 system. The computer is used by the Swiss weather service for climate modelling.

← **Tianhe 2A:** The Tianhe 2A (named after the Milky Way galaxy) is also a Chinese supercomputer located at the National Supercomputing Center. It uses the Intel Xeon E5 processors.

← **Trinity:** The Trinity supercomputer, named after the first nuclear test is housed at the Los Alamos National Lab, and is used to make sure that the US nuclear stockpile is secured and safe.
