↑ **ABCI:** Located at the National Institute of Advanced Industrial Science and Technology in Japan, the AI Bridging Cloud Infrastructure is used for artificial intelligence and machine learning.

↑ **Sequoia:** The third supercomputer on this list to be located at the Lawrence Livermore National Laboratory, Sequoia is now used for a wide range of civilian science research projects.

← **SuperMUC-NG:** This supercomputer is located at the Bavarian Academy of Sciences in Germany, and used to power the five sided CAVE virtual reality environment, as well as a 4K stereoscopic powerwall.

← **Cori:** The location in the national energy research scientific computing center gives away its purpose. It is named after the first American woman to win a Nobel prize in Science.

← **Lassen:** Lassen, like Sierra is located at the Lawrence Livermore National Laboratory, and has a similar architecture, but is just much smaller. The supercomputer runs unclassified simulations.

← **Nurion:** Located at the Korea Institute of Science and Technology Information, the Nurion supercomputer is in its fifth generation and is used for a wide range of scientific research.

← **Pangea III:** Owned by Total, a French petroleum company, this is the most powerful supercomputer dedicated for industrial use. The computer is used for seismic imaging and simulations.

← **Pratyush:** The top ranking Indian supercomputer comes in 57th in the global list, and is housed at the Indian Institute of Tropical Meteorology in Pune. It is made up of 18 liquid cooled cabinets.
