

DROOLMAAL

Samsung TV cardboard

While this doesn't exactly fit the criteria for droolmaal, you'd definitely need one of Samsung's expensive TVs to get your hands on these. To reduce their carbon footprint, Samsung has come up with an interesting new idea. Samsung's luxury line of

TVs, including The Serif, The Frame and The Sero come packaged in massive cardboard boxes. While they could have just left it at using eco-friendly cardboard, they've taken it a step further. Each of the boxes come with dotted matrix designs that customers can cut along. The cardboard boxes

can then be repurposed into shelves, magazine racks and even fancy houses for your cats! Each of these boxes come with a QR code, which you can scan to view instruction manuals for your cardboard projects. You can also make your own creations as well. Samsung even teamed up with Dezeen, a British lifestyle magazine, to award the most unique and practical design with a prize of \$20,000. The competition is live till the end of May, May 29 to be specific.

Project ICE superyacht

Nothing screams luxury like a yacht. Then there's super-yachts. But then, there's this super-yacht which comes with a giant kite attached to it. That's a new one. Definitely makes the yacht stand out. Of course, the kite is just one feature, this is a super-yacht after all, that's 211-ft of luxury on water. Titled Project ICE, the project is a collaboration between Dykstra Naval Architects and Red Yacht Design. The yacht comes with a whopping 5100 square-feet of open air space, this includes a sun-bathing area, a pool, a lounge

area and a dining area for 12! But that's not all, there's also two full-sized bars, a helipad at the bow, and even a jacuzzi. This is beginning to sound more like an ultra-yacht rather than a superyacht. On the inside, this yacht can accommodate up to 10 people in its 4 cabins, plus an owner cabin each

with his-and-her bathrooms and closets. Other than that, the yacht has an office, a lounge area, a spa and a two lounge area-cum-dining halls inside. And here we thought it was special because of the huge kite.

Brabus Shadow 900 Black Ops

German tuning company, Brabus is best known for working with companies such as Mercedes and Daimler vehicles. It's recently worked on an armored version of the new G-Wagen. Something that's a little less known about Brabus is that they've also worked in the maritime industry and have a range of high-end boats. The tuning company joined hands with Finish boat builder Axopar Boats back in 2017 to start Brabus Marine, and its latest flagship model, the Brabus Shadow 900 Black Ops Limited Edition is all set to make its debut this year.

The Shadow 900 is quite the beast if what the company claims is true. In addition to being superior to its predecessor in every way, the

boat is powered by Mercury Marine's latest dual 450R Verado XL 4.6 liter V8 FourStroke engines that produce 450 horsepower each.

The limited edition boat – only 37 are being made – features a gun metal grey paint job, all of which is done by hand. Each boat can take up to six weeks, just to paint and reach the required finish and polishing level. The boat has room for even more features, including two additional 9-inch screens and

WIFI on-board 4G connectivity for your smart devices. The boats will be available for sale starting August 2020 and the pricing is available on request only. Phew, that's exclusive.
