Ozark Season 3

★★★★☆ | Emmy-winning series, Ozark, recently returned for a third turbulent season. Featuring the Byrde family who are deep into the dizzying world of money laundering for a Mexican drug cartel, Ozark certainly has the slick frills of Breaking Bad pastiche. Similar to Breaking Bad, Ozark closely follows the delinquent Byrde family as they go deeper and deeper into a hell of their own making. The shrewd account Marty, played by Jason Bateman, his calculating, politically-inclined wife Wendy (Laura Linney) struggle with opposing ideals and strategies when it comes to keeping their errant operation, and most importantly, their beloved children safe.

This season also introduces a slew of quirky and menacing side characters who stir things up quite a bit for the family. We would easily categorise this season of Ozark being the most binge-worthy season owing to the sheer impact of the convoluted family dynamics and the unexpected twists. The Byrde

family has been notorious for running into unforeseen and life-threatening circumstances in the previous season, and this one is no different.

Acting-wise, Bateman and Linney are astonishingly-strong in their roles, each drawing in the audiences equally, Marty with his repressed nature and brilliant mind, and Wendy with her raw charisma. Wendy's brother, Ben (Tom Pelphrey) is a new but major character this season. He unabashedly steals the show on multiple occasions, often leaving the viewer's confused as to whether they want him to be protected at all costs or just killed off since he is such an immense liability. The season delivers heart wrenching moments as well as moments with pure shock value. But that's not it, the characters are continually evolving, or devolving in some cases, and you are taken on an erratic journey that is their character development. We're hoping Season 4 manages to intrigue and captivate us as well as this season has.

ANIME

Itai no wa Iya nano de Bougyoryoku ni Kyokufuri Shitai to Omoimasu

★★★★☆ | Is this another isekai anime? No, it isn't. Imagine that. Nobody's trapped in a game world, it's not a life or death situation, and the MC isn't a badass. Or wait, maybe she is? In like a dorky sort of way. The only thing it has in common with all those other isekai anime is that the MC or main character is broken. By which we mean overpowered. And for the most absurd reason but we guess we can let

that slide. The literal translation for the title of this anime is "I don't like getting hurt so I'll max out my defence". Yes. We're not even kidding. It's a loong title, and unfortunately they're becoming pretty common these days. Fortunately, this show's name has been shortened to BOFURI.

The setting is very simple, just a girl who's playing one of those VR MMORPGs that all those other anime protagonists keep getting stuck in, only this time the game and the hardware work the way they're supposed to and nobody's dying forreal. The game is treated as a game and nothing more, so it doesn't take itself too seriously, and in many ways, this anime is kind of a parody. It also serves as a beginners guide for people who aren't too familiar with MMORPGs since the MC is a complete noob and has to figure out how to play from scratch.

This leads us to how she's overpowered. Veteran gamers will know never to put any points into defence (vitality in the game, which is technically HP?), or even if we do, it's not going to be too much. Even tanks don't pump points into defence for the most part. Apparently, the devs of this particular game didn't account for anyone pumping points into def and somehow, maxing out your def makes you an unkillable fortress. Who'da thought? Overall, this is a lighthearted and fun show to watch.
