Real age of tectonic plates?
The Earth's tectonic plates could actually be a billion years older than thought initially. <https://digit.in/jun20-10>

The interiors of Arwah caves

EXPLORE INDIA

Put these places on your bucket list and pack your bags

Aditya Madanapalle | aditya@digit.in

In these pages you will find some of the lesser known places that deserve to be visited in India. All of these places have been picked for their scientific or historical interest. Addi-

tionally, all of them are scenic or unique enough to spice up your social media feeds as well. If this list is not enough, then there are some of the most awesome natural wonders of India that you can visit, listed in the August 2018 issue of Digit. If we missed something that should be here, then please do write in and let us know!

ARWAH CAVES

As you begin up the trail, a quaint little signboard declares that the left path is "rugged" in red letters while the right is a "pleasant walk" in green letters. This is a hard choice to make as both the

paths are picturesque. The entrance is a sunk chamber with paths leading off to all sorts of nooks and crannies, where you have to duck and squeeze through the narrow pathways. There is an underground stream, as well as stalagmites and stalactites. There are also fossils of crustaceans and fish that are millions of years old, and these portions are lit by lightbulbs. It is recommended to take a torch along though. Only a portion of the vast cave is open to tourists, and there are cordoned off areas. Getting there is another adventure, because it is close to Sohra (previously known as Cherrapunji).
