GOOGLE ASSISTANT HAS COME A LONG WAY from its initial days of simply leveraging Google's powerful search engine to display basic information. It is now equipped to facilitate the next level of hands free usage. Assistant can now easily navigate through your daily schedule, translate languages in real time, understand contextual questioning and much more. Conversations with Google Assistant also tend to feel much more natural now, partly due to the improved voice output and partly because of contextual

understanding. In addition to being on all Android devices, Google Assistant can also be utilised on iPhones and a couple of third-party smart speakers. When using Google Assistant, remember to pick your primary Google account since you will get the most out of the Assistant only when it has access to your Photos, Gmail, and other such accounts. Now, let's look into some interesting things you can do with Google Assistant.

SET UP DAILY ROUTINES

Google Assistant allows you to set up routines which instruct the assistant when to perform what action. There are numerous preset routines already available on Google Assistant including a Good Morning routine,

Bedtime routine, Commuting to work routine, and more. You can customise each of these preset routines to your liking. For instance, by default the Good Morning routine, when prompted by the user saying 'Good Morning' or 'tell me about my day' to Google Assistant, will relay the time, weather, today's calendar events, and today's reminders. After this, it will start reading out the news.

You can change this up by heading over to the Google Assistant settings and then going to the 'Assistant' tab. Scroll down and tap on 'Routines'. Under the Good Morning routine, select the actions you want Assistant to take when you say good morning. You can choose to make the phone come off silent, adjust media volume, tell you about your commute to work, adjust the thermostat if you have a smart thermostat, adjust other smart devices (lights, plugs, etc) and more. You can even add custom actions here. Additionally, instead of playing news, you can also make Google Assistant play specific music you want to wake up to such as a playlist, artist, album or even genre.

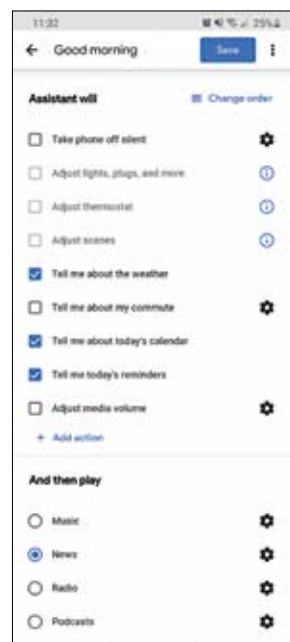

CUSTOMISE YOUR NEWS SOURCES

If you have certain news portals that you primarily rely on for your daily news, you can customise the news sources that Google Assistant will leverage to read out the ongoing in the world. To do this, go to Google Assistant

settings and then head over to the 'Services' tab. Find 'News'. Here you can change the order of the websites that Google Assistant will read news from. So, if you want Google Assistant to read the sports news before anything else, simply click on 'Change Order' on the top right and drag the sports website to the very top. You can also remove or add news sources as per your preference.

To remove news sources, simply click on the 'X' next to the name of the news source in the list. To add news sources, scroll down the page and then click on add news sources. Here you can see a huge list of news websites to choose from under different categories such as General, Technology, Business, Sports, World, Entertainment, Politics, Science and many more.
