

You can also change the region by clicking on the drop down menu at the top of the screen and choosing 'English (India)' for Indian news websites. Once you have found your websites, simply check the box next to the news source and the news sources will be added.

SET UP LOCATION-BASED REMINDERS

You may already know that you can use Google Assistant to set simple reminders. All you need to do is say "OK Google, remind me to..." at whatever time you please. These can be quite useful, however, there's a way to go even further. You can use Google Assistant to set ridiculously specific, location-based reminders. So, the next time you are in the vicinity of your local supermarket, Google Assistant can promptly send you a reminder to say, buy milk. Or, the next time when you're near your bank, Assistant can remind you to deposit your cash. The applications are endless. Let's tackle the first example – buying milk from the local supermarket. Simply tell Google, "remind me to buy milk when I go to xxx (supermarket) in xxx (area)". As long as the supermarket is on Google Maps, Assistant will be able to recognise the location and add it as a trigger to set off the reminder.

ASK GOOGLE ASSISTANT TO REMEMBER SOMETHING

Another simple yet nifty thing Google Assistant can do is simply remember something. Has it ever happened to you that you remember you need to do something extremely important only to forget it hours or

EASTER EGGS

Try saying these things to Google Assistant and see how it responds! Write to us at editor@digit.in to tell us your favourite Google Assistant Easter egg.

- OK Google, Up, Up, Down, Down, Left, Right, B, A
- OK Google, who is the real Slim Shady?
- OK Google, do you like Star Trek or Star Wars?
- OK Google, who is the fairest of them all?
- OK Google, tell me what you want, what you really really want?
- OK Google, crystal ball
- OK Google, tell me about Siri
- OK Google, self destruct
- OK Google, do you speak Morse Code?

even minutes later? With this feature, you really don't have to worry about such memory slip ups anymore. If you have something important you want to remember in the future, simply tell Google Assistant to remember it. Say you're going to a family friend's house but for the life of you, you cannot seem to keep their son or daughter's name in your mind. Instead of being red-faced later on when you inevitably forget their name, just tell Google Assistant to remember it before the gathering, and then when the moment comes, simply ask Google Assistant "what did I ask you to remember". You can even type it for extra discretion. Assistant will show you everything you have asked them to remember. Show it, but not say it. Phew!

USING INTERPRETER MODE

Using Google Assistant to translate languages is quite common, however, you can also take it up a notch and translate in real-time with Interpreter mode. Interpreter mode can translate actual flowing conversations in real time between 44 languages! This also includes a few Indian languages such as Hindi, Bangla, Gujarati, and Malayalam. All you need to do is say, "OK Google, be my {insert language} interpreter. Interpreter mode will open up and Google Assistant will show and speak both sides of the bilingual conversation in real time.

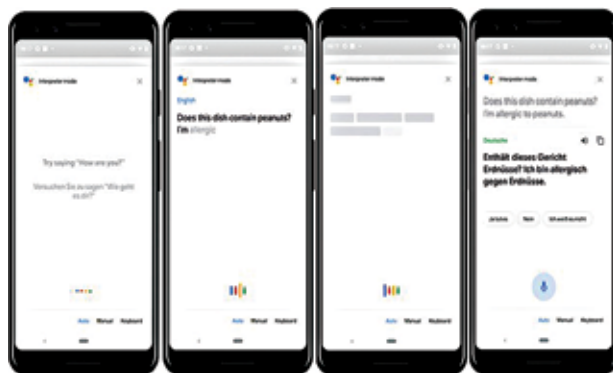

However, for languages that Assistant still cannot speak in real time, such as Bangla, the Interpreter mode

will be manual. Here, both participants will have to tap the microphone button before speaking. In auto mode though, the conversation is free-flowing and the translations will be spoken out without the need to do anything manually. This mode can even be used on any Home Speaker or a smart display.

PLAYING AROUND WITH GOOGLE LENS

Google Assistant can also leverage your smartphone's camera to help translate signs, copy text from posters, notebooks, etc, and to know what you're looking at with Google Lens. Previously exclusive to only Pixel devices, Google Lens has now been rolled out to other Android smartphones as well. To use this, first ask Google Assistant to open Lens and then you can choose between any of the five modes. The Translate Mode will translate any text you see to your language. So, if you were in another city or country, you can simply point your Lens camera to a sign in a different language and Lens will overlay the translation in the language of your choice. The Text Mode allows you to point Lens at some text and will give you a bunch of options such as copying the text, listening to it, and more. The next mode is Auto Mode which simply tells you more about what you're looking at. So, if you're at a tourist destination and you point Lens to a famous spot, it pulls up internet results with more information about the spot. You can also use Lens to buy products by simply pointing it towards a gadget or bar codes in Shopping Mode.
