Inkarnate

Create fantasy worlds

Aditya Madanapalle | aditya@digit.in

Inkarnate is a map making web application that allows you to use simple paint and stamp tools to create stunning fantasy worlds and medieval maps. You can help your dungeon master out by making maps for an RPG campaign, create reference maps for that epic fantasy story you are writing, or craft the setting for a medieval tabletop game. Even if you do not want to do any of those things, Inkarnate is a great tool for creative self expression, allowing you to build villages, cities, continents

and entire worlds. There is a free version that gives you a taste of what the web application can do, but the paid version is really where all the magic is at, with far more assets available for you to use. In April 2020, Inkarnate got its most massive update ever, with the addition of filters, new art styles, the ability to populate your maps with people, new tools, art packs, stamps and options to export your creations in 4K and higher. Then in May, there was a Viking patch with nordic updates. Here is how you can get started.

UNDERSTANDING STYLES

The first thing that you have to do about Inkarnate is to understand the styles, and picking the style that is most suitable for your project. If you want to create scene maps, or maps

of particular locations, then go for Fantasy Regional HD. If you want to create maps of entire worlds, or large continents, then go for Fantasy World. If you want to create maps that cover worlds or continents, similar to the maps at the beginning of fantasy works such as A Game of Thrones, The Dragonbone Chair or The Lord of The Rings, then go for Parchment world. This style looks like it has been inked by a medieval scribe. Now, if you want birds eye view type maps of large cities, with details still discernible, then go for Fantasy Regional Classic. Selecting a style dictates which assets are available to you by default when you start creating a map. However, this is not a strict restriction as once you are actually making the map, you are allowed to freely use assets from any of the styles. It is however recommended to stick to a single style for at least your first few maps, to give it consistency. If you are doubtful about which style to go for, just pick Fantasy Regional HD, as the assets can be used in a variety of ways, and are flexible enough to work in a range of different situations.

MAKING CUSTOM BACKGROUNDS

You can create documents in the 4:3 or 8:5 aspect ratios. In landscape mode, these documents have a resolution of 8,192x6,144 for the 4:3 ratio and 8,192x5,793 for the 8:5 ratio. The 1:1 ratio uses a resolution of 8,192x8,192. These resolutions are only for editing the map, and you can choose higher resolutions during the time of exporting. Bear in mind that you have to use the mask tool, to add or subtract land masses before you can start using the paints and the stamps. Remember to save your creations frequently as unlike other web apps, if the browser crashes or your machine powers off, your work is not saved automatically.

Now, instead of the water, you can load in custom backgrounds, which can be used for all kinds of things. A fantasy world that we are playing in has a blue sun, and you
