

The end of the world

The most likely scenarios for how Earth will meet its ultimate fate, according to science! <https://digit.in/jun20-134>

The world in 10 years

By 2030, we will have widespread DNA testing, a Moon base, and maybe even no poverty. <https://digit.in/jun20-135>

HOT EARTH

In a dystopian future, the average temperature difference from pre-industrial averages ($^{\circ}\text{C}+$), is rising fast! Let's take a look at some important events of the past 150 years.

Goodbye Kulu

JANUARY 3, 2042 |

TEMPERATURE: $1.5^{\circ}\text{C}+$

The Columbus Zoo, Ohio, sadly announced the death today of the world's last remaining polar bear. Kulu was named in an online contest way back in April 2020, when he was a mere four months old. Over the past five years we have seen all polar bears disappear from the wild, and all of the bears in captivity die off one by one.

Trump admits to possible mistake

JUNE 14, 2046 |

TEMPERATURE: $1.7^{\circ}\text{C}+$

Donald Trump, 45th president of the United States celebrated his 100th birthday today in the company of his children, including current democrat president and daughter Ivanka, who recently announced the setting up of the Climate Force. In an exclusive interview with CNN, Trump admitted he might have acted on bad advice to leave the Paris Agreement and the WHO.

CO₂ levels rise yet again

MAY 4, 2068 |

TEMPERATURE: $2.3^{\circ}\text{C}+$

For the 110th year in a row (since measurements started), CO₂ levels have risen appreciably once again. When measuring started in 1958 the CO₂ was between 280 and 290 parts per million (ppm), today, it's over three times that, at 863 ppm. Scientists have measured the amount of CO₂ escaping from the 60% of the Amazon that is now dead, and found that the feedback loop is complete. There is nothing humans can do to reverse global warming and rising CO₂.

Oh Canada!

JULY 22, 2130 |

TEMPERATURE: $3.1^{\circ}\text{C}+$

Canada, the world's food supplier, has ordered 40 percent of its 300 million citizens to take up farming and beekeeping (apiarists), in order to meet the food needs of the world. Canada is following in the footsteps of New Denmark (Greenland), who announced a similar project last month.
