

Roadie 3

Funding: US\$ 208,880 pledged of US\$ 40,000 goal

Link: <https://dgit.in/Roadie3>

The Roadie 3 is an automatic guitar tuner which is the successor to the wildly popular Roadie 2, the most funded music accessory in crowdfunding history. Band Industries has now brought out the updated version, the Roadie 3, which features a motor twice as fast as the Roadie 2. The motor reaches a speed of approximately 120 RPM. The company claims it comes with next-gen vibration detection which delivers improved tuning accuracy and enhanced noise immunity. With the Roadie 3, musicians can tune any string instrument with geared pegs within seconds. This includes electric, acoustic, classical and steel guitars, as well as 7, 8 and 12-string guitars. You can also tune ukuleles, banjos, mandolins, and more with the Roadie 3. However, you cannot tune electric bass guitars, for that you would need the Roadie Bass. How does this automatic tuner work, you ask? When placed on a tuning peg, the Roadie 3 listens to the vibrations of guitar strings, analyses its pitch and then automatically turns the peg to tune your string, all when you simply pluck a string. The company also claims that you do not need to be experienced at tuning at all, and even novices can pick up a Roadie 3 and quickly tune their stringed instruments. The device also comes with a full colour, LCD display that displays animations and information. It also comes packed with 100+ built-in tunings and space to save custom tunings as well.

OYO Nova Gym

Funding: US\$ 2,488,026 pledged of US\$ 30,000 goal

Link: <https://dgit.in/OyoNova>

OYO Fitness has launched their NOVA portable gym which uses NASA's SpiraFlex Technology to mimic weights. This product is the successor to the OYO Personal Gym. The NOVA Gym addresses user feedback for their previous product and increases the amount of resistance provided by the fitness gadget, allowing for a more sweat-inducing workout. The SpiraFlex resistance technology was first developed in order to ensure that NASA astronauts remain fit during their time at the ISS. According to a NASA study, the SpiraFlex technology produced the same results as lifting free-weights. NOVA

Gym utilises SpiraFlex-powered 'FlexPacks', each weighing 10 lbs. Four of these can be attached to the equipment to provide up to 40 lbs of resistance. Nylon-coated stainless steel cables are used which can easily withstand high resistance loads. The T-Handle grips on the equipment have steel inserts which provide greater extension than the OYO Personal Gym. The company claims that the OYO Nova Gym is a full-body gym which you can hold right in your hands. Reportedly, you can perform over 100 exercise movements on this portable equipment that weighs only about 1.1kg and folds up to fit in many bags too.

EcoFlow R600

Funding: US\$ 1,099,060 pledged of US\$ 100,000 goal

Link: <https://dgit.in/EcoFlowR600>

The EcoFlow R600 is a portable power station with a modular design which allows users to customise the capacity and AC power. The base model has a capacity of 288Wh, which can be expanded with an extra battery module and turned into the R600 Max with a capacity of 576Wh. Meanwhile the R600 Pro variant boasts of a capacity of 768Wh. This means you can easily power devices such as hair dryers, televisions, microwave ovens, 150W refrigerators,

laptops, and more. Additionally, there's the X-Link Chaining Technology which can transform two R600 MAX/Pros into a 1200W battery-powered generator. The company has also introduced the X-Stream Recharge Technology with the EcoFlow R600 lineup which allows the power station to recharge at an extremely rapid rate – full charge in a mere two hours (for the

Pro variant) using any regular wall outlet. Users camping or trekking outdoors can even harness the power of the sun to charge the R600. The company claims about 200W of solar energy can recharge the R600 in about two hours with perfect sunlight. This is twice the speed of the industry average and is achieved by leveraging the EcoFlow patented MPPT. The power station is compatible with most solar panels on the market as long as the voltage is within the range of 11V-25V. The power station can even be controlled and monitored through the EcoFlow mobile app. Lastly, the EcoFlow also comes equipped with a bunch of ports including one USB-C, three USB-A, and two 12V DC outputs to charge other devices on the go.
