THIS MONTH IN TECH:
This month in tech, learn
about the 'unhackable'
or quantum internet, we
delve into the origins of
data storage, explore
the world of STEM-based
toys, and much more.

Facebook on VR studio acquisition spree

Facebook, which has been
acquiring several VR game
studios over the past year
has now announced the
acquisition of Ready at
Dawn Studios which joins
Beat Games and Sanzaru
Games as the list of
acquisitions continues to
grow longer. These studios
are known for producing
some of the most popular
VR titles in the market.

WHAT'S NEW

Apple move from x86 to ARM is now official

Apple announced that it is switching to its
own ARM-based processors for some
of its Mac devices starting this year.

Apple has been using Intel processors in its iMacs
and Macbooks for about 15 years now. By
switching to an ARM-based silicon, Apple will be
able to bring apps from the iOS store onto the
desktop and notebook form factors. Apple's next
major macOS update, Big Sur, has already laid the
groundwork for this transition and Apple will be
updating its own apps to be native to the new
ecosystem. Microsoft is also working on updating
Office for Apple's new chips with popular apps

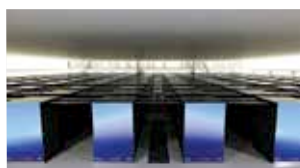

such as Word and
Excel already done.
Apple had used a
dynamic binary
translator called
Rosetta to help with

the transition from PowerPC to Intel processors in
the past and will be including Rosetta 2 with Big
Sur to help with the upcoming transition. The
transition will take place over a two-year period
and Apple even unveiled a Developer Transition Kit,
a Mac development system based on the Apple
A12Z Bionic SoC. <https://dgit.in/AppleARM>

Fugaku supercomputer propels Japan to No.1

Fugaku, the latest super-
computer from the land of
the rising sun, has bumped the
Oak Ridge National Laboratory
supercomputer to second posi-
tion on the Top500 list. Fugaku
is reportedly capable of running
2.8 times more calculations than
the IBM system at Oak Ridge
National Laboratory. Fugaku
is capable of crunching 415.5
PETAFLIPS, which is massive.
The last time Japan held the
number one spot was in 2011

when the K Supercomputer
went live at Riken. As of now,
the fledgling supercomputer
holds the number one spot in
the Top500, Graph 500, HPL-AI
and HPCG rankings. No other
supercomputer has ever held
all four rankings at the same

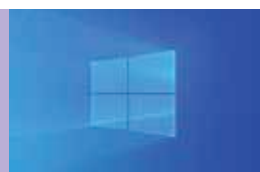

time. At the heart of the Fugaku
lies thousands of ARM-based
processors, designed by Fujitsu.
The Fujitsu A64FX is a 52-core
SoC of which 48 cores are
used for compute and 2/4
cores are used for OS activities.
Fugaku has 158,976 A64FX
SoCs tied together by Fujitsu's
proprietary Tofu interconnect.
Fugaku was promptly put
to use to help study, diag-
nose and treat Covid-19.

Subscriptions purchase without app install

Google is testing a way to
allow users to purchase
subscription plans without
downloading the app. The
subscriptions would be hosted
on the Play Store and the
functionality for this is made
available through the Android
Billing Library version 3.

Microsoft Insider now on Channels

Microsoft is changing how
users can adopt different
builds by moving from the
ring model to the familiar
channel model. The shift
will let users know what
they're in for which picking
a particular release channel.
The new channels will be Dev,
Beta and Release Preview.

mixer

Mixer to shut down in favour of Facebook Gaming

Microsoft stated that it will
shut down Mixer, its streaming
service, and provide existing
partners the option to switch
over to Facebook Gaming.
Mixer is slated to shut down
on July 22, 2020 and all
exclusive partners can move
to a platform of their choice.
