

GPS and Navigation apps

Accomplish much more than just getting from point A to point B

WITH MODERN-DAY SMARTPHONES MAKING GPS APPS SO ACCESSIBLE, it is hard to fathom a world without them now. Gone are the days of handling cumbersome physical maps, now we even have the power to access accurate turn-by-turn navigation through our smartwatches!

Not only that, GPS apps also do away with several unpleasanties such as unanticipated road closures, aggravating traffic-ridden conditions, and not knowing the exact time of arrival. Nevertheless, even though we have access to powerful GPS and navigation apps today, it's safe to say that most users probably do not unlock the full potential of these nifty services. These apps are already capable of much more than just getting from point A to point B. Additionally, most of these apps allow the users to download offline maps, in case internet connectivity

is an issue in certain areas. So, without much further ado, here are some tips and tricks for some of the most widely-used GPS and navigation apps that will help you unlock their relatively hidden potential.

GOOGLE MAPS

Google Maps is synonymous with GPS for most users around the world. In

fact, even though the Apple ecosystem has its own navigation app (which we will discuss in the next section), Google Maps is still preferred over Apple Maps by many iPhone users. It is chock-full of features and tools that make it more than just a vanilla navigation app, but more like a geospatial search engine for the whole world around us. Let's delve into some tips and tricks to maximise your Google Maps experience.

GO OFF THE GRID WITH INCOGNITO MODE

Google Maps introduced the highly-awaited Incognito Mode in 2019, however, it still remains a relatively unknown feature, buried within the app. You can choose to selectively turn this mode on when you want particular trips to be off the radar, or simply keep your location secret all the time if that's what you want. However, you must note that Incognito Mode doesn't affect how your location data is tracked or used by internet providers, other apps, and Google services. It simply pauses your travel history in Maps and stops location sharing with other Maps users, if you have enabled it. Nevertheless, this could be useful for instances where you're planning a surprise for a special someone and
