

you don't want them knowing where you're going, or things along those lines.

To enable Incognito Mode in Google Maps, tap your profile photo in the top right corner of the screen and then search for Turn on Incognito Mode. Once you are done with your covert operation, simply follow the same steps to turn Incognito Mode off.

### ADD MULTIPLE DESTINATIONS TO YOUR TRIP

Google Maps isn't merely limited to providing users directions from one stop to another. In fact, you can plan an entire trip on Maps, complete with rest stops and gas station visits. You can also add stops to pick multiple people up on the way to your destination. This way you can actually get a pretty accurate estimate of your ETA since Maps will incorporate the time needed to take those detours in order to make all those stops along the way.

To add stops, go to Google Maps and enter your first destination. It could be the address of a friend you need to pick up, or a gas station, coffee shop, restaurant, etc. Now, click on the three-dot menu in the top right corner of your screen. Now, click on Add Stop and simply search your next stop or your final destination. You can keep adding as many stops as you anticipate taking during your trip. Not only that, but you can also move around these stops as you see fit by dragging them using the = symbol on the right side of the stop's name. Finally, press Finished once you have created your travel route and you'll get a more accurate ETA.

### VISIT TOURIST SPOTS (OR ALMOST ANY SPOT) VIRTUALLY

Google has a nifty feature called Street View which allows users to look at a place

Exploring the Ajanta Caves in Street View

virtually via 360-degree photos. You can virtually 'walk' down paths of cities, taking in a 360-degree view of the surroundings via a multitude of panoramic photos which can be seen by swivelling your phone around. However, the 'Street Views' which allow you to walk around the streets are present in touristy locations. Other locations usually have 360-degree photos that people can view but aren't in continuation and don't form paths people can virtually 'walk' down. Still, they provide you with a pretty elaborate view of how the place looks in real life. Many hotels, restaurants, parks, and other such attractions in India have these 'Live View' photos present on Google Maps now. Note that this experience is the best on Desktop since you can actually use the W, A, S, D keys to 'walk' around the street, instead of awkwardly swiping around and double-tapping on the phone.

To start Street View on desktop, simply search for a place of your choice and then click on the little yellow

figure on the bottom right corner of the screen. Drag and drop the yellow figurine on the exact location you want to view. You'll either see a labyrinth of blue lines or simply some blue dots.

The blue lines indicate 'Street View', meaning roads you can virtually walk along, while the blue dots indicate 360-degree photos that you can view by dragging your cursor along the screen. On mobile, simply search for the location you want to virtually visit and then click on the photo to on the left side of the screen, above the name of the place. The photo has a little swivel or rotation symbol on it. Now, you can walk along the path by double-tapping the direction you want to go in and you can look around by dragging your finger across the screen.

### MANAGE GOOGLE MAPS HISTORY

If you didn't already figure it out, Google Maps tracks you everywhere you go and has a detailed account of your travelling history. You can actually view your history in Maps and tweak it around too. Also, if you want to

delete certain places from your Maps history, you can go ahead and do that as well. Head over to your profile icon in the Google Maps app and click on Your Timeline. Here you can see a detailed account of every place you have travelled during the day. You can also check previous days by clicking on 'Today' at the top of your screen and choosing a date from the calendar. Now, you can choose to delete certain places Maps has recorded or even add places Maps may have not recorded. To add a place, click on the three dots on the top right corner of the screen and click on Add a place. Now, search for a place, click on it, modify the timings if need be and hit 'Save'.

To delete a place, simply click on the location in your timeline and hit the trash button on the top right corner. You can also delete an entire day's history by clicking on the three-dotted menu and then selecting 'Delete day'. If all of these location-saving shenanigans are a bit too creepy for you, simply head over this link - <https://digit.in/Timeline> - and then navigate to 'Manage Location History' and switch off the feature altogether.

### TRY THIS!

Search for Area 51 in Google Maps and hover the yellow Street View figure above it. The yellow figure will transform into a UFO!

### REMEMBER WHERE YOU PARKED YOUR VEHICLE

Google Maps can also be a handy GPS reminder of where exactly you parked your vehicle. In India, chaotic parking situations are the norm since many crowded places in cities will sometimes have you
