

Head over to your device's (not the app's) Settings menu. Now, go to Maps and then go to Driving and Navigation. Here, toggle on the Tolls switch to avoid them completely in your travel routes. In this menu, you can also toggle the 'Highways' switch to avoid taking highways to reach your destination.

SHARE YOUR ETA

Texting your friends and family to let them know where you are or how long you will take to reach a destination can be quite unsafe when you're driving. To combat this, you can quickly share your ETA from Apple Maps itself to let your friends and family know your location status. Swipe up on the info panel when you're navigating and then tap the Share ETA button. Maps will show you five recent contacts and a Contacts button that lets you access your entire contact list. Tap on the person you want to send the information to and they'll receive it as a text message. They will be able to see your ETA in real-time on iMessage until you reach your destination. Also, to be safer, try to set this up before you start driving to avoid using your phone when you're on the road.

WAZE

Waze is a popular and powerful crowdsourced map application that Google has acquired. It is also one of the most feature-rich GPS and navigation apps out there, sometimes even more so than Google Maps due to the ability to add and remove icons indicating traffic jams, police, crashes, constructions and more, as per your choice. It is highly dynamic since user-generated information is

constantly layered on top of the map to provide the most accurate information. While many of Waze's functions are pretty similar to what Google Maps can accomplish, some are quite unique. Let's look at some useful tricks you can use while navigating around with Waze.

menu. Tap on Voice Directions and then click on Record new voice. Name your voice to, well... your name and then Waze will prompt you to record multiple voice prompts. Also, you don't really need to say what Waze is prompting you to say. Mix it up and make it fun and crea-

feature, you can now get preemptive notifications for when it is time to leave for a planned drive or an upcoming calendar event to reach on time. To receive such alerts, keep the location services on your device set to Always On for Waze and ensure that Waze can send you notifications and reminders by altering your device's settings. Now, head over to Settings in Waze and then scroll down to Planned drivers and turn Connect Calendar to on. Now, when you create calendar events, ensure that they have a navigable address attached to it. The app will automatically send you reminders for when to leave to reach your destina-

Waze's Planned Drives feature helps you stay punctual

RECORD YOUR OWN VOICE FOR NAVIGATION

Waze has a quirky feature that allows both Android and iOS users to record their own voice for navigation purposes. So, for all you narcissists (jk) out there, who love the sound of their own voice, you can now listen to directions in your own voice and even share your voice navigation commands with other users! To use this feature, launch Waze and tap on the magnifying glass icon and then go to the Settings icon in the top-left corner of the pop-up

tive! Something along the lines of 'Buckle up homies' instead of 'Start Driving', maybe? However, ensure that you keep safety in mind and make sure you never mess with the right and left directions (don't interchange them since this could lead to serious accidents). To share your voice directions, tap the share button next to your entry in the Voice Directions menu and then share it via text, email, or social media.

NEVER BE LATE AGAIN

With Waze's Planned Drives

tion on time. In addition to being able to integrate with your phone's calendar, Waze can also integrate with Facebook Events.

To create a manual Planned Drive, enter a destination in Waze and then click on the 'Waze Planned Drives' (an alarm clock) icon in the Waze ETA panel. Now, just enter when exactly you need to reach the destination and the app will do the rest. The app will now be able to suggest departure times based on real-time traffic conditions.
