The new pair of wireless earbuds from Oppo are priced at ₹2999 with a five hour battery life. <https://digit.in/jul20-102>

Sennheiser Momentum True Wireless 2

Immaculate build and stunning sound quality

The highly-awaited Sennheiser Momentum True Wireless 2 has finally arrived in the congested and cutthroat true wireless market. These are the German company's second stab at the true wireless in-ears form factor. Let's find out how the earphones fared in our review.

Build and design

Sennheiser has retained the aesthetic of the original Sennheiser Momentum True Wireless earphones, nevertheless, they do boast some functional design and build changes. The earbuds' size has been slashed down slightly, making them more streamlined. They are still bulkier than diminutive earphones such as the Samsung Galaxy Buds Plus and the Jabra Elite 75t, however, the slight decrease in size has made them more svelte overall. The charging case features a gorgeous woven fabric finish, much like its predecessor. While the case is aesthetically-pleasing, it is slightly on the larger side and will definitely bulge out of most pockets.

Comfort and fit

The reduced dimensions have made the earphones feel more comfortable over longer listening sessions than the original Momentum True Wireless. The earphones provide a snug and secure fit in the ear as well. The company has included four pairs of silicone eartips in the box (XS, S, M, L).

Features

The Sennheiser Momentum True Wireless 2 come equipped with an array of features. The most prominent ones being Active Noise Cancellation (ANC) and Transparent Hearing mode.

The outer surface of each earphone also doubles as a touch pad. The default

FEATURES.....	81
PERFORMANCE.....	84
BUILD	82
VALUE.....	72

controls are a bit un-intuitive. Fortunately, the touchpad commands are completely customisable via the Sennheiser app! Speaking of the app, it hosts a customisable EQ as well. The Sennheiser Momentum True Wireless 2 also comes equipped with the latest Bluetooth

v5.1 and an Auto-pause feature. Audio codecs such as AAC and aptX are also supported on the earphones.

Sennheiser has also more than doubled the battery life on the MTW2 compared to its predecessor. You now get a total of approximately 28 hours of battery life, with 7 hours on the buds and 3 additional charges (21 hours) via the case. The earphones also sport an IPX4 rating, USB Type-C charging but they lack wireless charging on the case.

Performance

The Momentum True Wireless 2 pack the same 7mm dynamic drivers as the originals did, however, there are some subtle changes and even improvements to the sound quality. The bass response is absolutely sublime. The earphones have an astounding control over the quality of the bass which never strays away from prioritising quality over raw power. In *Seven Nation Army* by *The White Stripes*, the bass guitar sounds taut, well-controlled and textured.

The mid accuracy on these earphones is also pretty remarkable. Lead instruments and vocals sound divine and natural. It brings a certain rawness to vocal-centric tracks as well. While overall the highs seem pretty detailed

and well-produced, there's a higher-than-usual drop in the lower-treble range that sometimes compromises a bit of detail, especially in female vocals. If this bothers you, you can always bump up the lower-treble range slightly via the customisable EQ.

Now, let's talk about the quality of the Active Noise Cancellation. While these earphones certainly do not reproduce the level of ANC over-ear headphones can provide, they do diminish background sounds significantly. The earphones do a stellar job at drowning out constant sounds and chatter such as the hum of the AC and even some voices. It does better at cutting out low rumbles in comparison to higher-frequency sounds.

Bottomline

The Sennheiser Momentum True Wireless 2 had lofty expectations to meet, in more ways than one, and they have actually managed to meet and even surpass most of those expectations. Despite some tiny issues, the earphones are truly remarkable. However, they are not for everyone, owing to the exorbitant price. Still, if you can afford to buy these stellar earphones, you will most likely be extremely pleased with your purchase.
