

Motorola One Fusion

The launch could be just around the corner as the device was spotted on the Google Play console. <https://digit.in/jul20-103>

New phones for India

Micromax and Karbonn have a number of launches lined up including devices with UI made for India. <https://digit.in/jul20-104>

Noise Shots Rush

Relatively affordable sports earphones plagued with comfort issues

Indian audio company, Noise, has created waves in the audio industry due to their lineup of affordable and efficient audio solutions. The Noise Shots Rush is one of the company's latest true wireless offerings dedicated to those living an active lifestyle. Let's find out how they did in our tests.

Build and design

Noise branded these earphones as sports earphones, geared towards people with an active lifestyle. The earphones come with 'sports ear hooks' (large silicone hooks that go around your ear).

Alas, shape of these earphones tends to hamper the overall comfort. Something about the earbuds' shape and the degree to which they are angled causes extreme pressure and discomfort within the insides of your ear. We advise you to try these earphones before buying them, if you can, to see if you face the same issues.

Putting the comfort issues aside, the earphones are primarily made out of plastic but still feel pretty robust and premium. The stems of the earphones houses the touch panels which allow users to control playback and calls.

Owing to the large footprint of the earphones, the charging case is also massive and rather unpocketable. The rear side of the case features a micro-USB charging port. *sigh*

Features

The Noise Shots Rush come with an IPX5 sweatproof and water-resistant rating which means that the earphones can easily shrug off sweat and even light rain. They are powered by Bluetooth 5.0 and support the AAC codec. They also come equipped with full touch controls, as mentioned above.

VALUE.....	69

Three taps on the right panel activates Game Mode.

Noise claims that Game Mode drops the latency to a lowly 85ms. We played PUBG Mobile with Game Mode turned on and there was almost no perceptible delay in the sound of the

shots being fired, which is commendable. The earphones also come packing an EQ with three fixed sound presets - Pop, Rock and Classical.

Coming to the battery life, the company claims that the buds can power through 6 hours of continuous usage, while the charging case can top up the earphones three times over. That's a total battery life of 24 hours. In our tests, we found the company claim to be moderately accurate as well.

Performance

Packing sizable 12mm drivers, the Noise Shots Rush have an overall warm sound profile. However, their sound profile is actually split into three varied ones. There are three genre-specific audio modes available on the Noise Shots Rush - Pop, Rock and Classical. By default, the device is set on the Pop audio mode and tapping either earbud 4 times will allow you to cycle through these EQ presets.

Starting off with the Pop Mode, in our opinion, this mode is the weakest link out of all three presets. This mode features an A-shaped sound signature with accentuated mids and vocals and suppressed lows and highs. The vocals have an unmistakable intensity to them, which we really liked. Sadly, the Pop mode sorely lacks bass response.

Coming to the Rock mode, this features a V-shaped sound profile that accentuates the bass response, lows, and the highs. Vocals take a bit of a backseat in this mode and the spotlight is mainly on all the instruments, as it should be. However, if you like keeping the volume high when rocking out to tracks, the highs can get slightly tinny and jarring, while the lows become slightly distorted and muddy.

The Classical mode tends to have a mids-focused sound profile with a bit of a bass punch to it as well. In fact, pop tracks actually sound better in this mode than the Pop mode, which is counterintuitive. If you don't want to deal with the hassle of switching up audio modes, we'd advise you to just keep the Classical Mode active at all times. The bass is sufficiently punchy, the vocals are detailed and well-rendered while the highs are a bit underemphasised but not tinny.

Bottomline

Priced conservatively at ₹3,999, the Noise Shots Rush are a decent pair of earphones. However, the harrowing comfort issues stop us from recommending these earphones. Nevertheless, if you do get a chance to try these on and aren't plagued by similar comfort issues, they become quite a lucrative purchase.
