Wings Glide

A decent value for money purchase with a couple of misses

A pair of budget wireless earphones, the Wings Glide are a lucrative buy at just ₹1,199. The company has previously provided some competent, affordable audio solutions such as the Wings Alpha, the Wings PowerPods, and others. So, let's see how the Wings Glide fared in our review.

Build and design

The Wings Glide sports a rather common neckband-style design with a largely plastic build. While this causes the earphones to feel a bit plastic-ky and cheap, the earphones are extremely lightweight.

The earphones have a matte-black finish and the earbuds themselves come with a smooth matte texture. The wireless earphones' modules are lightweight as well and the left one features three physical buttons, one LED indicator, and the charging port. The three buttons have a rubber texture and feel quite grippy. The buttons have a nice tactile click as well. The controls are also simple and intuitive.

Lastly, the earbuds are small, ergonomic and provide excellent fit within the ear. The comfortable fit also allows you to wear these earbuds for hours on end. We can also recommend these earphones for gymming and running since they pretty much stay put once you put them on, without any signs of budging at all.

Features

The Wings Glide is rather lacking when it comes to features, but it does provide users with some basics. The earphones come equipped with Bluetooth v4.2 and as per the company, this provides roughly 30 feet of wireless connectivity range (without obstacles). In our tests, the connection was decent and there weren't any odd lags or skips in the audio when listening to music.

The Wings Glide also comes equipped with an IPX4 rating which means it can shrug off sweat and light splashes. The earphones also support voice assistant.

Coming to the battery life, the company claims that the Wings Glide is capable of about 6 hours of playtime. In our tests, we were about to get about 5 hours of playtime with these earphones at 50 per cent volume. The battery life on the Wings Glide is definitely lacklustre since these days, even true wireless earphones come equipped with over 5-6 hours of juice in the buds themselves, with extra juice provided within the charging case. They come with a micro-USB charger instead of a Type-C, which is expected at the cost, but it is aggravating to have to carry multiple chargers for different devices.

Performance

Featuring a rather pleasant, warm sound profile, the Wings Glide sounds good with multiple genres. It features a V-shaped sound profile which sounds pretty decent when listening to hip hop, pop, and EDM music. The bass is punchy and has lots of drive, however, in some tracks such as *Another One Bites the Dust* by Queen, the bass can get a bit boomy and mar the quality of the vocals. Still, the bass doesn't get as boomy

as we've witnessed on some other budget devices and sounds relatively pleasing overall.

Vocals, on their own, sound decent. The mids are slightly underemphasised so the vocals can take a backseat to the other low and high-end instruments at times. The earphones also do much better with female vocals though.

The highs are strictly mediocre. If you're someone who likes to turn the volume up high they can actually get a fair bit tinny. Sibilant sounds can sound harsh at times on these earphones. The soundstage, as expected, is largely limited, however, the imaging is decent.

Coming to the media, the earphones can actually power through action movies with explosive 'booms and thuds' enhancing the experience.

The latency is also pretty low and there's very little perceptible delay between the audio and video. Call quality on the Wings Glide also pleasantly surprised us since the receiver could hear us quite clearly and the voice didn't sound distant or muffled as on many budget wireless earphones.

Bottomline

Priced conservatively at ₹1,199, the Wings Alpha are actually a pretty solid budgetary purchase in the wireless earphones segment. If you are able to let go of the lack of features, the Wings Glide features a decent build, comfortable fit, and decent sound quality. We especially liked the call quality and the ergonomic nature of the earbuds. So, if you're on a budget and prefer a warm sound profile, the Wings Glide may be the earphones you're looking for.

—Dhriti Datta

SPECIFICATIONS

Driver: HD Neodymium driver | Battery life: 6 hours | Charge time: 1 hour | Mic: Yes | Music controls: 3-button control | Voice assistant: Google Assistant and Siri supported | Colour options: Black, Blue, Green, Magenta | Warranty: 1 year
