

Cubiio 2

Funding: US\$ 739,040 pledged of US\$ 25,000 goal

Link: <https://dgit.in/cubiio2>

After the wild success of the Cubiio fabrication tool on Kickstarter, the company has come back swinging with their second-generation product. The Cubiio 2 is a laser cutter and metal engraver sporting a sleek, refined look and a small footprint. The device weighs merely 6kgs and is 25 inches long diagonally. The Cubiio 2's laser cartridge is capable of engraving a wide array of surfaces including titanium, glass, brick, concrete, and other materials. It also works seamlessly on curved surfaces allowing you to engrave items such as pens or wine bottles. Its applications are quite unique and you can create a custom design on a paper, scan it via the accompanying app and then directly engrave the design onto

an item of your choice. The engraving is outputted at a resolution of 500 DPI or 0.5mm, which is thinner than a strand of hair, ensuring that you get precise replications of your handiwork or design. You can also preview the engraving on the accompanying app by simply inserting the object you wish to engrave inside the machine, and then snapping a top view image of it. Next, you can place the custom design onto the picture of the object in the app and scale, rotate, or position your artwork as you intend to. The device then outputs your desired result. Alongside engraving items, the Cubiio 2 is also capable of cutting materials into a custom design or shape. Materials including paper, wood, leather, acrylic, felt, fabric, cardboards, and others can be cut using this nifty device.

Lumos Ultra

Funding: US\$ 1,314,584 pledged of US\$ 60,000 goal

Link: <https://dgit.in/lumosultra>

The Lumos Ultra is a streamlined bike helmet chock full of features such as integrated LED lighting, turn signals, remote control support, and more. It comes with bright front and rear LED lights and turn signals which can be controlled via the provided remote control. The remote control is completely wireless and fits onto the handlebars of most bikes. It features two large buttons which trigger the left and right turn signal indicators positioned on the back of the helmet. If you own an Apple Watch, you can even completely do away with the remote itself and activate turn signals via the watch itself by simply raising your arm! The helmet comes with some optional add-on accessories as well including a visor and MIPS (Multi-directional Impact Protection System). The helmet also is adequately ventilated and it directs air through its internal ventilation system and pushes it out via three exhausts on the rear end to ensure that the rider stays cool even on inordinately sunny days. The helmet is also crash-test certified in various tests and comes packing an IPX6 rating making it essentially weatherproof. Despite packing integrated LED lights and a battery, the helmet weighs 370gms, which is a huge decrease in comparison to the company's very first helmet which weighed about 490gms. Lastly, you can also choose between a wide array of colour options as well as three different sizes.

GoGoLeash

Funding: US\$ 39,330 pledged of US\$ 5,000 goal

Link: <https://dgit.in/gogoleash>

The GoGoLeash is possibly one of the most technologically advanced all-in-one dog leash and collar system you can get your hands on. The leash's handle is no simple handle. It houses a variety of things, right from a built-in LED to a water tank! It is a smart leash and collar, to that end, it comes with a features such as a vibration collar and a Sound Training mode. For individuals with hearing-impaired dogs, the vibrating collar can prove as an aid and help you to get your pup's attention.

Sound Training mode, on the other hand, can help you train your dog to recognise particular sounds or tones and associate them with a particular action. The GoGoLeash Sound Training system has a maximum range of a whopping 650 feet! The dog leash is also compatible

with regular car seat belts, allowing you to attach the leash to the seat belt when you're driving to keep your dog secure in the car. The handle of the leash, as well as the collar, features built-in LEDs to allow you and your dog to see the path even in dark environments. It also comes equipped with a small water tank and a built-in drinking bowl to keep your pupper hydrated during those walks. Not only this, it also holds up to 15 disposable waste bags to collect your dog's poop and it also features a bag-disposing compartment. Additionally, one leash handle can hold multiple leashes (maximum of 5 dogs at a time). The handle can bear a weight of up to 100 kgs.
