

Liutanie Olimpo Gold

If you're looking to build the swankiest home theatre system you can think of, you're going to want to jazz it up with these cables. From Italian company Liutanie Audio, what we have here are what can be considered the best neutral gold connections you can get your hands on. Furthermore, they're handcrafted, and it shows. These are the most beautiful cables we have ever seen, worked on with the same care one would take with jewellery. But that's not even the point, regardless of how good the cables look, the goal of these cables is all about "reproducing unmatched audio". According to Liutanie, plugging in these cables will reset every parameter in your audio system to neutral. Restoring its balance, naturalness and dynamic range.

Liutanie claims that these cables will eliminate any and all distortions caused by wiring, be it humming, hissing, those mid-frequency nasal sounds that distort all your audio, all of it.

These cables have a current capacity of 100A which allows you to push volumes even higher without listening fatigue. The Liutanie Olimpo Gold cables come with different lengths and variations, depending on use-case. The price for the complete kit is a whopping \$72,000, and buyers can request custom lengths and connections as well.

YuJet Surfer

Watersports startup YuJet has come up with something for surfing enthusiasts. Imagine if you could surf, without needing the waves? That's exactly what they've come up with, an electric jet-powered surfboard that works just as well on flat water. No need to paddle on flat water anymore. It essentially works the same way a jetski does, and propels the board forward by shooting water out the back. The goal with the YuJet surfer is to make surfing accessible even when the conditions aren't right for surfing. The board is supposedly very easy to learn, with the company claiming that it takes just five minutes to learn. It also comes with a wireless remote control which can be used to adjust the speed on the board. The board is made out of carbon fiber, which makes it incredibly lightweight; without the battery, the board weighs only around 10kg. The company claims that the board has a range of 25km and can run for 40 minutes on a single charge. It can reach speeds of up to 40 km/h! Which is pretty nuts. The board is available for shipping worldwide, and will set you back by a nice \$9,999.
