

SECURITY WATCH

BlackRock Android Malware poses as fake Google updates

The BlackRock Android malware can reportedly steal personal data from over 337 popular Android apps. BlackRock is a banking malware that steals personal information but is different from other such malware since it targets social networking, shopping and dating apps, as well as essential apps such as Gmail and Outlook. The threat was discovered in May by ThreatFabric analysts. BlackRock banking malware disguises itself as fake Google Updates notifications that pop-up on the user's phone. Once given access to the phone, the malware can conduct overlay attacks and can steal information such as login credentials, banking details and more. It also cannot be detected by mobile antivirus as it doesn't let the user open any security apps.

MOBILE WATCH

OnePlus Nord

After months of relentless teasing, OnePlus launched the highly-awaited, OnePlus Nord. Powered by the Snapdragon 765G SoC, the device launched in three RAM/storage variants – 6GB/64GB, 8GB/128GB and 12/256GB – priced at 24,999, 27,999 and 29,999 respectively. It comes with a 6.44-inch display with FHD+ resolution, 20:9 aspect ratio and 90Hz refresh rate. The phone also features a quad rear camera setup with a 48MP primary lens, an 8MP wide-angle lens, a 2MP macro shooter and a 5MP depth sensor. The dual setup on the front includes a 32MP primary lens and an 8MP wide-angle camera. The Nord runs Oxygen OS10.5 based on Android 10 and comes packing OnePlus' proprietary Warp-Charge 30T fast charging tech that claims to charge the 4115mAh battery from 0-70 per cent in 30 minutes. It also features a speedy in-display optical fingerprint sensor.

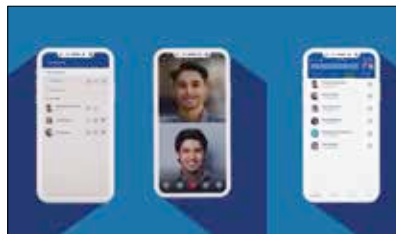

APP WATCH

JioMeet

Video conferencing apps have pretty much taken over the world ever since the novel coronavirus pandemic struck. Amidst high demand for such apps, the Indian telecommunications company, Reliance Jio, has decided to enter the lucrative teleconferencing sector with its own app, JioMeet. The app is available on both Android and iOS devices and competes with popular video conferencing apps such as Zoom, Google Meet, Microsoft Teams, Cisco WebEx and others. The app has a simple and oddly familiar interface, especially if

you've used Zoom. The design and feature set is almost identical to Zoom. JioMeet supports direct calls (1:1 calling) and is also capable of hosting HD quality meetings with up to 100 participants. The app is also completely free to use and you can create unlim-

ited new meetings in a day. Much like popular video conferencing apps, the meetings can be password protected and the app also supports a waiting room for meetings.

JioMeet also comes with multi-device login support on up to five devices. You can also seamlessly switch between these devices even when you're on a call. There are some more standard features such as screen sharing, while some innovative ones such as Safe Driving Mode which automatically disables video to prevent distractions while driving. Meetings on the new video conferencing app can go uninterrupted for a whopping 24 hours as well, which is much longer than Zoom's limit for free users – 40 minutes. Overall, the app hosts a wide array of features and the interface looks pretty simple and uncluttered. The app has already amassed over 1 million installs on the Play Store and it looks to be gaining a lot of traction in a little over a month of its release.

FilmBox by Photomyne

FilmBox is an AI-powered negative film scanner that can scan old negatives of photos. The app is free to install but you will need to pay for unlimited scans, photo saving, and sharing.

DolbyOn

DolbyOn is a powerful recording tool that can enhance and clean up recordings. The app is capable of automatically reducing background noise, optimising volume levels, widening the stereo effect and applying EQ.

Enlight Quickshot

Now, finally on Android as well, Enlight Quickshot is famous for its unique features such as replacing the sky in photos, one-tap auto-fix button, an array of gorgeous filters, and more.
