Google Translate

The seemingly simple translation app brimming with lesser-known features

DECADES AGO, INSTANTANEOUS TRANSLATION BETWEEN MULTIPLE LANGUAGES was akin to science fiction more than real life. Star Trek's Universal Translator was something we looked at, absolutely flabbergasted, never think-

ing it may actually become part of our reality someday. Today, with Google Translate and other translation services, we are closer than ever to that fantasy actually being a reality. Granted, Google Translate is not as powerful as the Universal Translator, but it is an extremely capable tool that can let you communicate with almost everyone around the world. It is capable of instantly translating words and phrases between English and over 100 other languages spoken all across the world. Although most phones don't have it as a

preinstalled app, if you're someone who travels across the world frequently, it is an almost indispensable tool. Furthermore, it has an array of features over the simple type/speak-to-translate feature. So, here are some useful tips and tricks to get the most out of the Google Translate app.

QUICKLY TRANSLATE AND TRANSCRIBE ENTIRE PARAGRAPHS OF TEXT

Often, when you think of translating from one language to another, you just settle for a sentence or two. However, if you want to translate entire paragraphs of text, say in a book of another language, you can do it seamlessly on Google Translate too. No, you don't have to type or speak out

the entire paragraph! That would be excruciatingly time-consuming. All you need to do is fire up the Google Translate app and then click on the 'Camera' button. Now, point your camera at the text you want to translate and transcribe. Click on 'Scan' at the bottom of the app and hit the shutter button. Now, use your finger to highlight the exact paragraph you want to transcribe in your native language. Finally, click on the blue arrow on the top of the screen.

The translation of your selected text will appear at the bottom of the page. You can press the 'speaker' button to have it read out loud, or you can simply copy it by tapping the 'Copy' button at the bottom of the translation.

HAVE A FLOWING, TWO-WAY CONVERSATION

The main Translate UI incorporates tools to quickly translate a word or phrase, however, the app also hosts a separate Conversation Mode for when you want to have a flowing, two-way conversation with someone who speaks a different language. To enter this mode on the app, simply open the app and then navigate to the 'Conversation' button, which is right next to the Camera button. Now, choose the language you will converse in by clicking the drop-down menu on the bottom left and then selecting your
