Jan Vormann on Dispatchwork

Interview with Jan Vormann on the meaning behind the collaborative art project. <https://digit.in/aug20-28>

Dispatchwork

Dispatchwork is a meatspace multiplayer game and art project initiated by Jan Vormann, where LEGO bricks are used to fill in cracks in walls, as a means for the general public to reclaim public spaces.

↑ You might have to squint to spot the LEGO bricks in this wall, but this is dispatchwork on a 5,000-year-old wall built by Phoenicians to keep the sea at bay. The brick fillings can be found in Batroun, a coastal city in Lebanon.

← Dispatchwork is particularly common in various cities around Europe, and this example can be found in an unassuming corner of Budapest, in Hungary.

← This hole in the wall in Philadelphia in the United States was originally for an AC unit that was no longer required, and was patched up with this pretty pattern made out of Duplo blocks.

← Las Palmas de Gran Canaria in the Canary islands has a crew that puts together dispatchworks around the city, one of the few places they can be found in Africa.

← This damaged brick facade in Wuppertal, Germany got a pretty and creative filling complete with a guardian minifig, but we are not sure if these are original LEGO bricks.

← This crumbling wall next to an empty ground in France was fixed up by kids and adults in the area who donated bricks from their LEGO sets towards the cause.

← This is a dispatchwork in London. All the locations mentioned here can be tracked on dispatchwork.info. Unfortunately, there are none in India... yet.
