Hello Robert,

I just wanted to thank you and Manish for giving me such a golden opportunity to write in SKOAR!

My article got published in SKOAR mag on page 80. Please give it a read, Robert.

I wanted to thank Manish too for helping me so much with the article and handling my dumb doubts.

I and Manish will be discussing about September's article today. Let's see how that goes. It's my dream to write for the main mag someday after I'm all grown up and have a bit more experience. Let's see how that goes too.

Again, a big hearty thanks to both of you 🙏

—Kshipra Jadav

Pleasure is all mine. We like it when we can be a platform for our readers, so thank you so much for writing in!

—Manish

Hey team Digit,

I had a break from Digit since 2 years as I was consuming content more on YouTube and did not have much time to have a read at the copies, now after the lockdown, I had plenty of time so I subscribed again and read the digital version now and

got some interesting views regarding the content and reviews seen on YouTube. Videos are like just up from the brim with the depth only shown till the time of like 10-15 mins, but when you see the literature version of the review it felt more in-depth and more into technical aspects of the product which is what I am interested in, so hopefully, I will continue to gather the hard copies once it starts shipping again, and yes I loved the posters that came with each issue, wonder if it still comes with them.

I have some reviews regarding the previous articles as I have started reading from the month of June, so will follow-up with them in the next mail when I finish reading all the issues to date.

I have a request, the current era being Type-C everything (almost, no iPhones yet) please suggest and review some type-c docks for a laptop as I am having a mac and others too struggling with standard ports like HDMI and micro sd card, so please suggest some good dongles for sub 10k budget.

Also, this is me trying to write an article like for the first time showing it to anyone, so please feel free to critique it and let me know the areas to improve, and if you guys like the article please feel free to write on the

topic, which you must be as it is a big thing now, but make your changes in them and feel free to publish if you would like to.

—Daksh Khorana

Thanks for writing in to us, you can find your article on page 68. We do encourage more readers to submit articles. For everyone who has subscribed, we are making sure that they get the physical copies of the magazine, even when it means that they sometimes get two! There might be delays if your area is in a hotspot, but rest assured that it will reach you eventually.

—Robert

Hello,

This is purely a suggestion e-mail for the e-dvd. I'll write a proper fan later some other day.

1. Please provide details about the e-DVD contents in the magazine. It'll be easier to keep track of things that way.
2. Provide a way for readers who get their magazine from news-stalls to access the e-DVD easily without going to help-desk every month by providing a QR code or something.

Thanks,

—Abhinash Dutta

PS: Just a little something about the magazine: The magazine, Fast-track, and the DVD seems to be running out of ideas. I don't know what it is but the August issue was not up to usual standards.

QR code is a great idea! We will look into it. You can always access the eDVD by going to geek.digit.com whether or not you are a subscriber. About the postscript, we have written about everything before, and often those articles are still ahead of the technology. We still will try to improve content in a world where magazines are dying out, and that is our main focus.

—Aditya
