**THIS MONTH IN TECH:**  
This month in tech, we explore programs that are bringing voice assistants to laboratories across the world, we learn about the history of 3D printing, delve into some tips and tricks for podcast recording and much more.

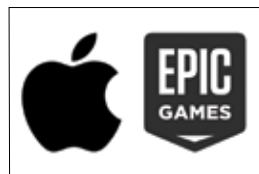

## Twitter faces \$250 million fine

Twitter has revealed that the Federal Trade Commission may fine it for misusing emails and phone numbers collected for enabling Two-Factor Authentication on its platform for marketing purposes. As per Twitter, the FTC is exploring a fine that could go up to \$250 million for the infraction.. <http://dgit.in/1MilPerChar>

### WHAT'S NEW

## Epic Games takes Apple to court over Apple tax

**E**pic games and Apple are embroiled in a legal battle over Apple's 30 per cent fees that it levies on all in-app purchases made via the Apple App Store. The battle started when Epic Games CEO, Tim Sweeney wrote to Tim Cook, CEO of Apple asking for Epic to be accorded special treatment in the form of being allowed to use an external payment method and to have a separate Epic App Store within the Apple App Store that would allow developers to publish apps for iOS without having to go through Apple's oversight. Apple sent a response to Tim Sweeney's email via their legal team claiming that it treats all

developers and app publishers equally and expects everyone to abide by the Apple terms and conditions. It should

be noted that Apple does, in fact, accord special privileges to certain developers and does not treat everyone equally. Epic Games decided to push a new build of Fortnite that has a separate payment option and as a result, Apple took down Fortnite from the App Store and disabled access to all developers tools. <http://dgit.in/EpicAppleBattle>

## NVIDIA RTX 3000 Series announced

**N**VIDIA has been running a massive PR campaign to build hype around their latest graphics cards, the RTX 3000 series. The RTX 3000 series aim to provide a lot more hardware accelerated ray-tracing performance and to do that NVIDIA has redesigned several aspects of the graphics card. One aspect is the new power connector. By combining two 8-PIN ATX PCIe power connectors into a

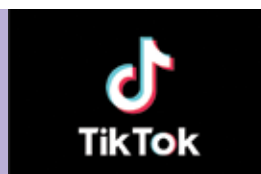

single 12-PIN connector on a much smaller footprint, NVIDIA was able free the board area consumed by power connectors. The other radical change is that of cooling fans on the Founders Edition cards wherein

there appears to be a dual-PCB design cooling fans arranged in a push-pull configuration so as to maximise the air flow within the shroud of the graphics card. We've seen MSI and Palit register multiple models that has pointed to the existence of an RTX 3090, 3080, 3070 and 3060. The initial launch is in September for the top two variants followed by the rest of the cards in later months. <http://dgit.in/NV3000>

### Netflix adding a Shuffle button

Netflix is planning to add a Shuffle button to the platform to aid viewers to pick what to watch. Netflix's recommender engine is one of the best in the business and this new feature is designed to aid watchtime on the platform. <http://dgit.in/ShuffleAndChill>

### Oracle joins Microsoft in bid to acquire TikTok

As the deadline for deciding TikTok's fate in the US market looms in the horizon, another company has decided to bid to take over TikTok's operations in the USA. Oracle, a database and cloud company is currently negotiating with TikTok. <http://dgit.in/OracleTok>

### Facebook account mandatory to use Oculus

Oculus announced that they will soon require their VR HMD users to sign up using a Facebook account. Separate Oculus-only accounts will not be available starting this October this year and existing accounts will be retained until January 1st, 2023. <http://dgit.in/FBOnlyVR>
