How the ROG phone 3 fare when it comes to emulating retro console games? <http://digit.in/sep20-22>

Jabra Elite Active 75t

The sporty variant of the impressive Jabra Elite 75t

T

he Jabra Elite Active 75t are the anticipated successors to the popular Jabra Elite

Active 65t, and the sports-oriented alternative to the relatively new Jabra Elite 75t. Let's see how the Jabra Elite Active 75t true wireless earphones fared in our tests.

Build, design and fit

The Jabra Elite Active 75t has a noticeably smaller footprint in comparison to the 65t models. The charging case is rectangular with rounded corners and slight divots on the top and bottom. The case can stand upright unlike the 65t models. On the back, there's a USB Type-C charging port and the front houses the understated Jabra logo.

The earbuds are shrunk down considerably in comparison to the Elite 65t models and now sport a diminutive and unassuming form factor. The angled nozzles aid comfort and fit. Jabra also includes three sizes of silicone ear tips and getting the right fit is imperative in order to get good noise isolation.

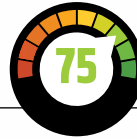

Each earbud also hosts a physical button, an LED indicator to relay battery information and microphone grilles. The physical buttons are extremely easy to push down and do not require much force. You can pause/play music, answer/decline calls, seek tracks, and even increase/decrease volume levels with the default controls. Additionally, the buttons are even customisable to your own preference via the accompanying Jabra Sound+ app.

Features

The Jabra Elite Active 75t is quite a feature-laden pair of earphones featuring IP57 rating, HearThrough mode, customisable controls and EQ, auto pause and play, multipoint connection and USB Type-C charging. However, some features that are missing, especially at this price point, include Active Noise Cancellation (ANC), aptx sup-

port and touch controls.

While we did not miss ANC (due to the superb isolation) and touch controls too much, we were disappointed due to the lack of aptX support. Wireless charging for the case was missing on our review unit, however, the latest models feature wireless charging.

The Jabra Elite Active 75t, much like the non-Active variant, can be used in Mono mode only through the right earphone. Most earphones, especially in this price range, offer Mono mode through both earbuds.

Battery life

Coming to the battery life, the earphones are rated at a whopping 7.5 hours while the charging case brings the total battery life to 28 hours. In our tests, at about 60-70 per cent volume, the earbuds lasted a cool 7 hours while the charging case topped the buds off three times over. There's also a Sleep mode which gets triggered after 15 minutes of no connection or 60 minutes of inactivity when connected. The earphones also come with Fast Charging abilities, where 15 minutes of charging time amounts to 60 minutes of playback.

Sound quality

The 6mm drivers inside the Elite Active 75t earphones produce a lively

and dynamic sound with punchy bass, detailed mids and decent highs. The overall sound signature lacks a bit of warmth due to underextended high bass, but the low bass features plenty of power and results in a low-end accentuated sound. There is slight auditory masking in the mids due to the extended low bass. The highs, on the other hand, are not too far extended but they sound pretty decent. They are usually not tinny or shrill, but at higher volumes you can hear some sibilance in female vocals.

Microphone quality is quite good. The earphones utilise a 4-microphone call technology which really does a good job at muting external sounds. We had some issues with wireless connectivity on the regular Elite 75t. This issue was completely absent in the Elite Active 75t, which featured solid wireless connectivity.

Bottomline

If you are scouring the market for a premium fitness-oriented pair of true wireless earphones that cost lesser than the AirPods Pro and the Sennheiser MTW 2, then the Jabra Elite Active 75t is a pretty good choice. They have a fairly well-balanced sound profile but you do miss out on features such as ANC and aptx support. However the stellar passive isolation certainly makes up for the lack of ANC.

—Dhriti Datta

SPECIFICATIONS

WEIGHT: 46 g total | DRIVER DIAMETER: 6mm | AUDIO CODECS SUPPORTED: SBC, AAC | FREQUENCY RANGE: 20Hz to 20kHz | IP RATING: IP57 | CONNECTIVITY: Bluetooth 5.0 | OPERATING RANGE: Up to 10 metres | PAIRED DEVICES: Up to 8 | MULTI-CONNECT: Two devices can be connected at a time | AUTO PAUSE MUSIC: Yes | MUSIC AND TALK-TIME: Up to 7.5 hours with earbuds and up to 28 hours including charging case | CHARGING TIME: 2 hours and 20 minutes | FAST CHARGE: Yes
