NOKIA 43-INCH SMART TV

Almost value for money

Nokia has been a household name in the phone business for decades jumping from Symbian to Windows Phone and now running on Android. In 2019, the brand delved into the TV space with the launch of a 55-inch TV. In 2020, it expanded that portfolio with the launch of a 43-inch and 65-inch TV. We are looking at the 43-inch Nokia TV. Let's see how it fared in our review.

Build and Design

The Nokia TV has a unique stand and will work well for those that will keep the TV on a small entertainment system. However, unlike the traditional 2 feet of the TV, you cannot keep things like a set-top-box or gaming console below the TV as the stand protrudes in front of the TV. This will also be a hindrance for those looking to keep a soundbar snug below the TV.

Coming to the connectivity options, the TV has one HDMI port and two USB ports on the side, and at the back, it has an AV in, ethernet port, two HDMI ports, optical port, a service port and good old antenna

When it comes to the UI, stock Android TV is the name of the game here. Once the initial setup is over, the UI is butter smooth. Voice controls work fine and if you have used an Android TV in the past, you will feel right at home.

The Nokia TV remote has a slightly angular design which makes it look like it is tilting forward when kept on a table. But when you hold it in your hand, you realise that this design gives it an ergonomic fit in hand. It also features a more detailed and old-school layout, featuring all the number buttons and some additional features.

Performance

Let's kick things off with the picture quality. The Nokia 43-inch TV brings with it a 10-bit ADS panel with a peak brightness of 300-nits. In addition to

Price
₹31,999

4K, the TV also supports HDR 10 and Dolby Vision.

Starting with Dolby Vision content on Netflix, the picture was slightly dimmer than we'd like, but it managed to retain detail. The Dolby Vision content is watchable and enjoyable on this TV, but in a brightly lit room, you will have some trouble with dark sequences.

The HDR 10 performance of the TV is quite underwhelming. Watching a show like Jack Ryan in SDR and HDR on this TV has a more significant difference than we saw with Dolby Vision content. A show like the Grand Tour on the other hand which is also in HDR did not face the same problem and was quite enjoyable.

We played a lot of FHD and SDR content on the Nokia 43-inch TV. The scenes in Young Sheldon look bright, and the facial features of the characters are visible with details. It looks like the TV is in the vivid present when consuming SDR content, but it was on 'standard' by default, making SDR content consumption a treat on this TV.

If consuming content on YouTube is what you like to do, then this TV won't disappoint. YouTube content is easily watchable without any trouble. FHD and SDR performance of the TV is pretty good and enjoyable.

For gaming, we used Assassin's Creed Odyssey, Forza Horizon 4, Gears 5 and Batman: Arkham Knight. Change to 'game mode' on the TV and the backlight drops to about 80%.

If you play in a bright room, we suggest you bump this up. In a dark room, it should be fine. Assassin's Creed Odyssey has a colourful environment but suffers from a warm tint on some TVs. That isn't the case here. When we played the game on this TV, the environment looked lush and detailed

with even the night sequences being fun to play.

The TV packs 24W speakers designed by JBL. The sound is clear even at low volumes, and for a small bedroom, which is great.

Verdict

The Nokia TV brings with decent Dolby Vision

performance and the HDR 10 performance is a hit or miss based on the content. Running on Android TV, you have access to the Play Store and all the streaming services built-in. The TV's speakers have good sound output. When connecting an external device, you can switch between HDR and SDR playback by controlling the HDMI 1.4 and HDMI 2.0 setting giving you good flexibility with an external device. But considering you can get similar performance from a TV 5-7K cheaper, you may want to consider your options before investing.

—Sameer Mitha

SPECIFICATIONS

PANEL SIZE: 43-inch (also available in 55 and 65-inches) | PANEL TYPE: ADS (Direct-lit LED) | PANEL RESOLUTION: 3840 x 2160 - 4K | PANEL REFRESH RATE: 60Hz | HDR 10 SUPPORT: Yes | DOLBY VISION SUPPORT: Yes | WEIGHT (WITH STAND): 9.4kgs | HDMI PORTS: 3 | USB PORTS: 2 | BLUETOOTH: Yes | WI-FI: Yes | ETHERNET: Yes | SPEAKERS: 24W of sound output (12 x 2) | BUILT-IN STORAGE: 16GB
