

Guiding Indian startups to entrepreneurial heights

Nexus Startup Hub makes strides in supporting the dynamic Indian startup ecosystem

Dhriti Datta | dhriti@digit.in

The proverb goes “necessity is the mother of invention”, and in a country as densely populated as India, necessities are aplenty. This has led to India housing the world’s third-largest startup ecosystem, as per Nascomm and Hurun Global Unicorn List 2019, and is expected to witness a YoY growth of 10-12 percent, according to Startup India. Evolving technology, increasing funding, and a burgeoning domestic market are important contributors to the astronomical growth of the ecosystem and the emergence of multiple home-grown unicorns. Nevertheless, the ecosystem is definitely plagued by some operational, regulatory and taxation issues that prohibit it from reaching its true potential. Some prominent issues include the unorganised and fragmented nature of the Indian market, lack of transparent policy initiatives, inadequate infrastructure, lacking knowledge and exposure, and insufficient business acumen.

There’s a real need for a nurturing and wholesome entrepreneurial

environment to be built by various stakeholders such as the government, corporates, educational institutions, and others, to transform the Indian startup ecosystem to be a serious force to be reckoned with. To that end, Nexus is an innovation hub and business incubator that is a collaboration between the US Embassy (New Delhi) and ACIR (The Alliance for Commercialisation and Innovation Research). The Nexus Startup Hub is housed at the American Centre in downtown New Delhi on Kasturba Gandhi Marg. Nexus has also partnered with various organisations in India including the Department of Science and Technology, FICCI, TiE, Indian Angel Network, AmCham, ISB, and others that work within the innovation ecosystem. The program is aimed at supporting

and showcasing India’s local entrepreneurial ecosystem and innovation while also inculcating seasoned business acumen to help successfully commercialise their technology and products. The United States remains an indisputable leader when it comes to startups and Nexus attempts to bring the business acumen and entrepreneurial smarts to the growing pool of innovative Indian startups.

UNEARTHING HIDDEN POTENTIAL: THE NEXUS INCUBATOR

The Nexus Incubator program offers a host of selected startups unbridled
