

SUCCESS STORIES AND ADDITIONAL INITIATIVES

Despite the fact that Nexus exclusively works with early-stage startups, the companies in Nexus' portfolio have already raised more than \$6.8 million collectively in grants and equity funding. The startups have also successfully created over 2,000 jobs across the country within merely 3 years.

According to Azulay, some of Nexus' biggest success stories include the likes of startups such as Escrow-pay – a digital payment escrow account supported by ICICI Bank, Axis Bank and Yes Bank with a recent fundraise of \$500,000, Morphedo – a product engineering bootstrapped startup with yearly revenues exceeding \$200,000, S4S Technologies – an award-winning food preservation company that raised more than \$500,000 in grant funding, Saral Designs – Winners of Innovate2Beat COVID Challenge by Marico where they converted their pad making

Nexus ran a virtual cohort with instructors conducting classes from the safety of their homes during the pandemic

machines to make masks, E3 Waste Solutions – a startup that works with the Delhi government to segregate waste at a municipal level, Phool (HelpUsGreen) – an award-winning social impact startup funded by Draper Richards Kaplan Foundation, BIRAC and Tata Trusts, Fabiosys – a startup that develops next-generation fiber technology for hospitals in partnership with IIT Delhi and

Pfizer, and DronaMaps – that works with five Indian states to support COVID initiatives, and the founders have been featured under the prestigious list of Asia 30 under 30.

From Nexus' more recent cohorts, the team is excited for what the future has in store for startups such as Pacify Medical (mentioned previously), Digantara – a startup that detects space debris in partnership with IISC (Indian Institute of Science),

Aloe Ecell – working to develop eco-friendly AA-sized batteries, Avrio Energy – a startup developing an algorithm to track energy consumption at an appliance level, among others. Azulay also said, "We have companies that have raised hundreds of thousands of dollars from outside investors, companies that have signed contracts with major US and Indian partners, and companies

MORPHEDO (COHORT 1)

Morphedo is a product engineering company that caters to research, design and manufacturing requirements of businesses and helps engineer smart electronics and electromechanical products. The company works closely with R&D and product development teams of startups, corporates, and even the government to provide them with assistance to build better products. The company also works on building innovative AI and IoT-powered technological solutions including Smart Delivery Box – a smart delivery box for no-contact delivery of online purchases, Swachh ATM (for their client EcoMaxGo) – an IoT enabled Reverse Vending Machine that collects plastic and glass bottles and tin cans and, in turn, rewards users with Wallet cash, Safe Cash (for their client Bleaf) – a currency and debit/credit card sterilising apparatus, and others. The company also dabbles largely in 3D printing high-resolution engineering prototypes and functional components for B2B clients.

Morphedo leverages industrial blue light 3D scanners that allow them to reverse engineer a product or part. This 3D scanning process generates point cloud data which is then converted into a 3D CAD model for

prototyping and even mass production. The company is currently working with DRDO, Ministry of Defense on a two-year project for research, design, development, testing and manufacturing of a Total Air Temperature Probe (TATP) for Light Combat Aircrafts (LCAs). The TATP is a platinum sensor-based unit, the output of which is critical to Flight control systems. This project aims to indigenise the development of TATP. The startup is also working with the Indian Navy, in collaboration with IIT Delhi, CARE Unit, to design an enclosure for acoustic sensors that are placed 15 meters under sea level to capture acoustic signals or vibrations within the sea.

Additionally, the company also has projects with Doordarshan, has worked with CDAC (Centre for Development of Advanced Computing), among others. Manya Jha, Founder and Chairwoman, Morphedo Technologies spoke to us about their experience with Nexus, "When we were selected by Nexus, for their first cohort, we were a team of two founders with a first few clients and just beginning to show traction. They helped us understand our core capabilities and how to effectively position and build upon them. We took that lesson very seriously. Since then, we have only grown multi-fold".
