

INDIA'S FIRST INTERNET SUV.
INDIA'S FIRST PURE ELECTRIC INTERNET SUV.

WHAT'S NEXT?

Since arriving in India we've stood for many Firsts. From India's First Internet SUV to India's First Pure Electric Internet SUV, you've driven the finest cars, experienced the first-of-its-kind technology, and cherished how it has helped your drives become easier and memorable. So what's next you may ask.

Sometimes when you are immersing yourself while driving, you wish your car could do a little more, be a little more and yet not compromise on the things you already love: best-in-class features, towering road presence, powerful capability, and luxurious interiors. So, we drew inspiration from our legacy and core values of craftsmanship and innovation. And The GLOSTER, with Next-Gen Automotive Technology was born.

The name 'GLOSTER' pays homage to our British genes and stands for being bold, sturdy, reliable and versatile.

GLOSTER was a British jet-engine aircraft prototype and the name today is a nod to great British engineering.

GLOSTER is a companion who adapts and adjusts for you while you are on the road. When you take it for a spin it delivers more than just power and thrills; its safety features actually look out for you. All it thinks is how you drive. What's ahead of you. What could be your next move.

One could say that **GLOSTER** has just one thing on its mind. You.

What would you call such a car?
At MG we call it the Selfless car.

And it's coming soon.
