

SECURITY WATCH

Mobile threats drastically increase

Kaspersky recently released a report on the Malware threats in Q2 2020 which indicated a substantial increase in the number of mobile threats detected and blocked by Kaspersky Solutions as compared to Q1 2020. The company noted an increase of approximately 93,232 threats between the months of April and July 2020. As per the report, Adware threats were the most common at 48 percent. RiskTool-type potentially unwanted software ranked as the second most commonly-detected threat while SMS trojans placed third. The report, however, indicated a decrease of Mobile Banking Trojans and Stalkerware in Q2 2020. The top 3 countries attacked by malware remained unchanged from last quarter with Iran at the number one spot, followed by Algeria and Bangladesh. India ranked sixth on this list with 13.54 percentage points.

MOBILE WATCH

LG Wing

In the current landscape of foldable phones, LG is ushering in something new with its futuristic take on the dual-screen format with the 'LG Wing'. Launched on September 15, the device features a 'T-shaped' form factor, with a small display hiding under the main screen. When activated, the main display turns horizontal, revealing a small square-shaped secondary display. The device features a 6.8-inch Full HD+ P-OLED display while the secondary display is a 3.9-inch G-OLED screen. In the camera department, the LG Wing sports a 64MP primary lens with OIS, a 13MP ultra-wide lens, and a 12MP ultra-wide big pixel lens. As for the selfie camera, LG has opted for a 32MP pop-up shooter. It is powered by the mid-range Qualcomm Snapdragon 765G processor along with 8GB RAM and 128GB/256GB of internal storage.

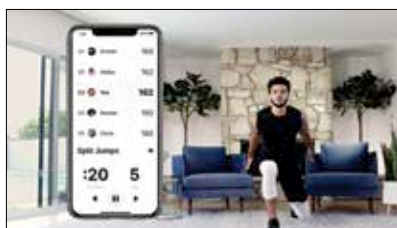

APP WATCH

Onyx

Amidst the ongoing pandemic, a lot of us have traded in our gym memberships to settle for home workouts instead. And while this is the need of the hour, working out at home with the same fervour as in a gym is pretty difficult. However, AI-powered app Onyx is a game changer in this sense. Dubbed as the 'world's smartest digital trainer', this iOS app not only provides a slew of home workout exercises but also gives real-time feedback about your posture, reps, and other such metrics. For those of you who sorely miss your personal trainer

in the gym constantly correcting your form, the app attempts to mimic that very experience by utilising your phone's camera to analyse and give feedback about your movement and posture. All you need to do is place the phone upright against a wall and then

simply watch and repeat exercises the instructor is explaining to you (such as pushups, planks, lunges, etc). The app's software analyses your movement and the AI trainer will make it known if

your form needs correcting. Be warned though, you will need to accommodate a considerable amount of space in your home for your exercise sessions, since the camera needs to be placed far enough to see your whole body. The app also incorporates a bunch of challenges into the array of workouts offered. You can see the stats of other people taking part in the challenge that you've accepted, invite your own friends to take the challenge and more. The app also awards users with trophies and badges which appear on their own personal leaderboards, as they complete recommended exercise sessions for the program they have chosen to follow. Overall, Onyx adds a level of personalisation to home workouts that make them feel fresh and incentivise users to be more active at home.

Motion Cam

A third party camera app that records RAW images before and after you snap a photo. You can customise the images by tweaking white balance, tone mapping and sharpness and using the inbuilt noise reduction algorithm.

Bibino Baby Monitor

Bibino is able to turn spare devices (smartphones or tablets) into a fully functional baby monitor. You pair two devices through the app and the secondary device acts as the video baby cam while the first one receives the video data.

Energy Notch

From the makers of Energy Ring, Energy Notch creates a glowing ring effect around your phone's notch which acts as a battery indicator. You can also customise the look of the indicator by tweaking thickness, colour, and more.
