Hisense 55-inches Ultra HD 4K Smart LED TV

A great value for money TV

O

ver the past year, we have seen a number of brands enter the

TV space in India, especially in the budget segment. Here we have with us a TV from Hisense, in the same segment. This is the 55-inch A71F. Is it a bang for your buck? Let's find out.

BUILD AND DESIGN.....74

PERFORMANCE.....78
VALUE FOR MONEY.....81

any competing TV and there are slight changes to the settings menu, which are welcome.

Display panel and picture quality

The Hisense 55A71F a 4K VA panel with support for both, HDR 10 and Dolby Vision. The TV comes with a bunch of picture

presents such as Dynamic, Standard, Movie etc. and when HDR content is playing, the picture presets change. For Dolby Vision, we have Dolby Vision bright, Dolby Vision Dark and Dolby Vision Custom. For HDR content we have HDR Dynamic, HDR Standard, HDR Sports, etc.

Performance

We used our standard slew of Dolby Vision and HDR content to test the TV. A show like Our Planet filled with lush nature looks sublime. The panel can get really bright especially when you have a bright sequence.

Even with the HDR content on a show like Jack Ryan, which is notorious for being dimmer than it should on budget HDR TVs, was very clear and enjoyable. The details in the darker sequences were clear and visible. We played a lot of FHD content as well.

Bright and vivid is the best way to describe the TV's SDR performance.

Coming to gaming, we played our standard slew of games from the Xbox One X. Visually, the games look vivid. Gears 5 has some dingy dark corridors and the content was clearly visible on screen without loss of details. A game like Assassin's Creed which is bright and vivid with the colourful countryside of Greece looks rich. Overall, the gaming performance of the TV is great even for games that present a dark environment.

Coming to sound, the Hisense 55A71F has 30W of sound output and not only is the sound from the TV loud, but it is also quite clear. For a minute we were surprised how loud the speakers of this TV got. For the room we set up the TV in, we didn't need to raise the volume more than 20.

From a movie like Togo on Disney+ Hotstar which has some incredible ice-breaking sound effects to Mission Impossible with its fast-paced action accompanied by a background score and even games like Forza Horizon that have a roaring engine that commands attention, it was well audible on this TV considering these are TV speakers.

Bottomline

It's easy to recommend the Hisense 55A71F considering the price and the features it brings to the table. It has a smooth UI, is feature-rich and above all has great picture performance for consuming content from OTT and playing games. The only qualm we have is with the design of the remote control. If you are looking for a 55-inch 4K HDR TV under ₹40,000 then you can definitely consider the Hisense 55A71F.

—Sameer Mitha

Build and design

The display has almost no bezels giving you quite an immersive experience. The TV has two separate feet that hold it in place. The TV has a relatively slim profile with all the ports at the back.

As far as connectivity goes, the TV has headphones out, 3 HDMI ports, 2 USB ports, ethernet, optical and an AV port. It also has an antenna port.

Now let's move to something we don't like about this TV – the remote control. The navigational buttons are too close to the menu, home, back and a few other buttons, which feels too cramped. The quality of some buttons on the remote too felt a little cheap as well. Apart from this, the remote is functional and gets the job done.

UI

The Hisense 55A71F runs on Android. Android on this TV runs as good as

SPECIFICATIONS
