Android phones in Europe will offer Bing alongside Google search via nomination. <http://dgit.in/oct20-79>

The lightest ThinkPad ever

At just 22 pounds, or around 1kg, the Lenovo ThinkPad X1 Nano is the lightest ThinkPad ever built. <http://dgit.in/oct20-80>

running on the GPU at that moment, might just crash.

This is essentially, an extremely dumbed down explanation of what's happening with the RTX 3000 cards. While the capacitors are the primary components causing this crashing issue, there are other stakeholders as well. A better GPU could probably handle the slight brown-outs (voltage dropping below usable levels) and switching to better components than what the reference design quotes would also be helpful, however, one can only figure out if the changes to design make a difference IF THEY CAN RUN THE GPU USING PROPER

DRIVERS. The partners were basically working with their hands tied behind their backs and as a result were completely in the dark about the GPUs they were putting on their graphics cards.

Some partners such as ASUS decided to switch to better capacitors anyway and are reportedly seeing fewer reports of crashes with their customers whereas some partners decided to go with their existing high-end designs from the GTX 1080 Ti cards and RTX 2080 Ti cards without being able to account for the changes needed for the new GPU. As of now, all we know is that the initial batches

of graphics cards from several partners are affected and they're investigating the issue. We don't know when the new board revisions will be out so it's best to hold out on buying the cards till the new revision is out. Also, India ends up getting stock a little slower than the rest of the world for high-end cards, so we might actually see more of the faulty ones trickling into the country for a little longer than US and EU markets so until the brands release notes on how you can identify if you've got the new improved designs, it would be prudent to hold out on purchasing these affected graphics cards. BUYING ADVICE

GAMING LAPTOP FOR 75K

Q Hey hey there Agent001!!! I'm looking to buy a new laptop (gaming only) for under 75k. Is the MSI Alpha 15 good to go? Or else which one should I buy and when? Please acknowledge me with details since I'll be using it for quite a long time! Thank you!

Keep rockin' :)

—Ashay Maurya

A Hey Aashay, The new MSI Alpha 15 with the AMD Ryzen 7 4800H and Radeon RX 5600M is a very good gaming laptop. For starters, the Ryzen 4000 mobile processors are very competitive against Intel's 9th and 10th Gen H-series processors, and the Radeon RX 5600M is more powerful than the

MSI Alpha 15

GTX 1660 Ti mobile graphics processor present in NVIDIA-based laptops within the 70-75K price range. At this price range, You'd usually end up getting an Intel Core i5-9300H along with a GTX 1650 Ti so the gaming performance on the Alpha 15 with a 5600M would be much better. On the other hand, if you're getting an older Ryzen 7 3750H and Radeon RX 5500M combo, then the performance will be neck and neck in most games and the 9300H is better than the Ryzen 7 3750H in a lot of benchmarks. So, we'd actually prefer the 9300H based configuration in this case, if that's your option.

RIG FOR WEB DEVELOPMENT AND GAMING

Q Hi Agent001, Can you suggest a configuration for a rig under ₹80k which will primarily be used for web development and occasional gaming (FIFA, Apex Legends)?

—Sanchit Dass

A Hey Sanchit, If you've already got the essentials, i.e. you're planning on retaining your monitor, keyboard, mouse and all that, then the following configuration should

be pretty good and falls within your budget.

- Processor: AMD Ryzen 5 3600
- Motherboard: ASUS PRIME-B450M-K
- RAM: G.SKILL Ripjaws V 16GB 3200MHz (2 x 8GB)
- HDD: WD Blue 1 TB (WD10EZEX)
- Graphics Card: Gigabyte GeForce RTX 2060 Super
- PSU: Corsair CV550
- SSD: WD SN550 500GB

Gaming PC

However, if you're looking to build an entire PC, including stuff like the monitor and peripherals, then you can check out this month's Entry-level Gaming rig under the Killer Rigs section on Page 51. [1](#)
