

ArduBee

Funding: US\$ 20,501 pledged of US\$ 49,062 goal

Link: <http://dgit.in/ArduBee>

The ArduBee is a quadrotor drone which sports the compact nature of microdrones with the build quality of high-end quadrotors. The ArduBee is a high-quality ArduPilot-equipped drone that was developed by the Luminous Bees team, who are known for their indoor drone-based light shows in Italy. At first glance, the ArduBee looks a lot like microdrones on the market with 3-inch propellers but they actually feature an array of advanced sensors and a fully-featured flight controller that runs ArduPilot, an open source autopilot flight software for drones, which runs on a powerful 32-bit STM32F427 microcontroller. It uses brushless

motors which allows it to fly both indoors and outdoors. The ArduBee also houses an array of sensors such as an IMU, a barometer, a compass, a downward-facing rangefinder, and also features a 18650 lithium-ion battery. All

these advanced components are integrated into the PCB that also doubles as the ArduBee's frame. What's more is that the drone is also modular, which means that you can add custom components onto the drone, as per your requirements. The company has developed numerous add-ons including an optical flow, GPS, indoor positioning system, Dev board, rangefinders for collision avoidance, and more. Despite featuring multiple sensors and a sizable battery, the drone weighs merely 100 grams, out of which 47g is the battery's weight alone!

RaceMouse

Funding: US\$ 132,488 pledged of US\$ 5,000 goal

Link: <http://dgit.in/RaceMouse>

Dhe RaceMouse is a compact and powerful mouse for those who travel often. Don't let its small form factor fool you though, its utility doesn't just end there. In addition to being a fully-functional wireless travel mouse, the RaceMouse also works as a touchpad and a presenter, which comes incorporated with a laser pointer. The mouse is also compatible with a wide range of devices such as Mac, Windows, iPad, Tablets, Smartphones, and Smart TVs. It pairs to devices via Bluetooth, eliminating the need for cords or receivers. Although the mouse doesn't come with any physical buttons, it supports controls such as clicking, multi-touch, scrolling, and even swiping. The mouse can be used in two distinct modes - Desktop and Free Mode. In Desktop Mode, the RaceMouse can be set upon almost any surface and used like a regular mouse (but with touch inputs). Free Mode allows users to pick up the mouse and use it like a remote control for TVs, tablets, and other devices. When using the device as a presenter, the RaceMouse can perform functions such as scroll up/down/right/left, zoom in and out, and more. The inbuilt laser pointer can be turned on by pressing the side button as well. Weighing a mere 27g, the RaceMouse is possibly the most portable yet functional travel mouse you can find on the market. It comes with a 40-hour-long battery life and fast charges back to full in only an hour via a USB-C cable.

Airbox

Funding: US\$ 27,522 pledged of US\$ 5,161 goal

Link: <http://dgit.in/Airbox>

The Airbox by Momax is a nifty wireless power bank for Apple products that can fast-charge devices such as the Apple Watch, AirPods, iPhone, iPad, and can even store an Apple Pencil. The Airbox even supports the latest Apple Watch Series 6 and SE. Equipped with a sizable 10,000mAh battery, the Airbox supports 10W wireless charging as well as 20W PD fast charge (via cable). As mentioned above, the Airbox comes with a slot to hold the Apple Pencil, but, unfortunately,

doesn't charge it at the same time. Nevertheless, this cordless charger is MFi certified and can power not just the iPhone wirelessly, but also any Qi-enabled smartphone. The Airbox has a foldable design which can be laid flat to charge all 5 devices at one time, and then folded

away into a more compact form factor for easy storage. The box can store the Apple Pencil and the AirPods in the folded form factor, doubling as a robust case for both these easy-to-misplace accessories. The device itself can be recharged to full battery in about 5 hours using 10W wireless charging. The company hasn't explicitly mentioned if the Airbox can be charged via cable, but we sure hope it can, since carrying around another wireless charger to charge the Airbox would be slightly counterproductive. Coming to safety, the Airbox has passed CE, RoHS, FCC, and CB international certifications and has inbuilt protections in place to avoid overcharge, short circuit, and overheating.
