hardware and platforms

AMD announces Ryzen 5000 processors

AMD has announced Ryzen 5000 processors based on the Zen 3 microarchitecture with up to 19 per cent improvement in IPC and up to 26 per cent improvement in gaming performance. Four new Ryzen 5000 processors were announced with no increase in core counts but the CCX can now incorporate eight cores instead of four as was the case with Zen 2. <http://dgit.in/AMDZen3>

WHAT'S NEW

US Govt. sues Google for alleged anti-competitive behaviour

The US Govt. has sued Google claiming that Google is an illegal monopoly. This would end up being the largest antitrust lawsuit against a tech company in more than two decades. The US Justice Department has made allegations that Google has throttled competition in order to secure its position in the marketplace for online search and search advertising and prevent competition from gaining any traction on platforms operated by Google. Aside from the Justice Department, eleven US states have also joined suit. The lawsuit alleges that Google pays billions of dollars every year to device manufac-

turers and browser developers to ensure that Google remains the default search engine and in many cases,

prohibiting the same OEMs and developers from dealing with competing search engines. Google's SVP of Global Affairs and Chief Legal Officer, Kent Walker put out a blog post stating that, "People use Google because they choose to, not because they're forced to, or because they can't find alternatives." <http://dgit.in/DOJGoog>

Apple launches iPhone 12, Mini, Pro and Pro Max models

Dubbed the iPhone 12 family, we have the iPhone 12, 12 Mini, 12 Pro and the 12 Pro Max. The biggest change was the inclusion of 5G radios which can work with most of the 5G services that are available worldwide. The Pro and Pro Max variants also feature a new LIDAR sensor which was introduced in the iPad Pro earlier this year in March. It will be used in

AR applications and for helping the cameras judge depth better and help the cameras on the phone focus quicker. iPhone's cameras have been some of the best there can be, especially for videography and this new

inclusion makes it even better. Another inclusion on the camera front is that of a new RAW format called Apple ProRAW which like other RAW formats will allow users to make even more modifications post production. Also, starting with the iPhone 12, you can now shoot videos in Dolby Vision which is an HDR format that enhances certain elements of the subjects to make the video more vibrant. <http://dgit.in/iPhone12>

YouTube bans more Coronavirus misinformation

YouTube has announced that it is expanding its content policy on misinformation to include conspiracy theories that the Coronavirus pandemic will be used to implant microchips into people and that the vaccine is likely to cause infertility in humans. <http://dgit.in/YtGoCorona>

Dropbox latest to make Work From Home permanent

Dropbox is the latest tech company to make Remote Working a permanent practice for its employees. Dropbox joins Twitter, Square, Microsoft and Facebook who are exploring permanent remote working positions for a major chunk of their employees. <http://dgit.in/DropWFH>

Facebook allegedly stifled left-leaning news outlets

FB allegedly tweaked their newsfeed algorithm to reduce the visibility of political news. Left-leaning news outlets were supposedly affected more. A Washington Street Journal report states that the update affected left-leaning sites more than intended. <http://dgit.in/LeftLeftBehind>
