

SECURITY WATCH

A previously unknown piece of Android spyware identified

Kaspersky successfully identified a previously unknown piece of Android spyware – a malicious module which was inserted into a travel application for Indian users. Further investigation revealed that it was related to GravityRAT, a spy Remote Access Trojan that is known for carrying out such activities in India. The group behind this malware put in effort into making this a multiplatform tool that could target Windows OS, Android and Mac OS. According to Kaspersky, the campaign is still very much active. More than 10 versions of GravityRAT are being distributed under the guise of legitimate applications such as secure file sharing apps. The modules can retrieve device data, contact lists, email addresses, call logs and SMS texts.

MOBILE WATCH

Vivo V20 Pro

The Vivo V20 Pro features a sizable 6.44-inch Full HD+ display that uses an AMOLED panel. There is a wide notch upfront, much like the iPhones, that houses the two selfie cameras and the screen is also home to a fingerprint reader. It is powered by the mid-range Qualcomm Snapdragon 765G processor with 8GB RAM and 128GB storage. The phone runs on FuntouchOS 11 which is based on Android 10. This upcoming phone comes with a triple camera setup on the back that consists of a primary 64MP camera, an 8MP ultra-wide-angle camera and a 2MP monochrome sensor. On the front, there is a primary 44MP selfie camera and an 8MP ultra-wide-angle camera with 105-degree field-of-view. The V20 Pro is powered by a 4,000mAh battery that supports 33W fast charging out-of-the-box.

APP WATCH

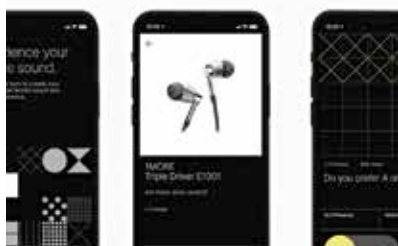

SoundID

Sonarworks, the company renowned for its precision audio software that's often used by creators in professional recording studios, has developed a music personalisation tool called SoundID. The app is not just available for mobile, but also desktop users. Currently, the audio market is saturated with devices, many of which come equipped with their own accompanying app that allows users to tweak the sound according to their preference. SoundID takes that further since it works on any pair of

headphones you can throw at it. Users can create a personal sound profile irrespective of whether the headphone supports an adjustable EQ or not.

Sonarworks acknowledges that sound quality is highly subjective and what may sound blissful to you

may be absolutely unacceptable to my ears. Driven to incorporate user subjectivity, Sonarworks' SoundID lets

you create an individual sound profile by leveraging smart algorithms and machine learning to learn what works best for you. It uses a three-pronged approach to identify your unique SoundID based on the pair of headphones that you are using, your own unique listening ability, and your sonic preferences. It incorporates these factors into creating your SoundID by asking the users a few simple A or B questions where you answer what works for you the best, the sonic frequencies you can hear best, and more. SoundID is compatible with a vast array of headphones on the market and you can check if yours is compatible by checking their official website. Your unique SoundID is also stored on the cloud for easy access and retrieval.

Bazaart

Bazaart is a new photo editor and graphic design app with which you can remove backgrounds, experiment with stickers, add backgrounds, and even save transparent PNGs after removing the background.

Snap Search

Snap Search is a nifty Incognito browser and secure search app that can put your online privacy worries to rest. The app doesn't save any actions you do, auto deletes history, cookies, sessions, and basically everything.

SlideScan

If you still have a collection of photoslides saved from back in the day, you can bring them back to life with SlideScan. All you need is a backlit source and the images get digitised with a decent degree of quality.
