

TOP 10 TOOLS TO SCHEDULE POSTS ON SOCIAL MEDIA

HootSuite

HootSuite not only lets you schedule social media posts but also allows you to schedule messages for up to five social networks. You can also monitor the activity of multiple social accounts from the HootSuite dashboard such as Twitter mentions, Facebook activities, and more.

Buffer

Equipped with a clean and simple interface, Buffer is an auto-posting social media management tool that is supported on PC, Android, and iPhone. You can also set up 'buffering patterns' which allows you to have different posting schedules for different days of the week.

Mentionlytics

Mentionlytics is one of the most powerful social media monitoring and analytics tools which allows you to schedule posts, monitor the performance of your posts, compare it with competitors and much more. The AI-enabled platform has a feature that can give you detailed advice to optimise your page's performance.

Dlvr.it

This is a useful auto-posting tool that allows you to deliver content to various social media platforms. With the Dlvr.it app, you can auto-share the content from the websites you choose, via their RSS feeds directly to your social media accounts.

Sprout Social

Any extremely easy-to-use social media management tool, Sprout Social can automate posts to Facebook, Twitter, LinkedIn, Google+ and other social websites. The app can also sync directly with Feedly. It also has a Chrome extension as well as an Android and iOS app.

OnlyWire

OnlyWire is a nifty tool that allows users to bookmark and auto-post over 30 sites simultaneously. All you need to do is to set up an OnlyWire account and add your RSS feed along with your social media profiles. The free version of the app supports up to 30 social media platforms and 1 RSS feed while the paid version lets you connect 3 RSS feeds and 50 social networks.

Post Planner

This is primarily a Facebook page management tool that allows you to automate post sharing on your Facebook account. The app can also curate content from your vertical and then schedule it for posting later.

Tweetdeck

This one doesn't need much of an introduction since it is an extremely popular tool for scheduling tweets. The platform, however, has a brand new interface that is close to HootSuite's dashboard. The only downside is that Tweetdeck no longer supports Facebook posting.

Social Oomph

Another social media management tool, Social Oomph has some great automation features, one of the best being queue reservoir. This feature allows you to queue your evergreen, popular posts for reposting. Social Oomph also auto-creates variations of the same content to ensure it doesn't look too similar.

Agorapulse

An all-in-one social management tool that combines all your social conversations, comments, and mentions in one place so you can easily preview and review to them. You can also set up automated moderation rules to tag or hide conversations, so you spend less time in your inbox.

may want to share other creator's content that is relevant to your page and following. So, a technology influencer would like to reshare MKBHD's latest post as a story or post on their social media platform since it is relevant to their crowd as well. At times like these, content curation tools are extremely viable since they cut down or completely do away with the time that would otherwise be taken up looking for relevant content.

For example, Hootsuite has a feature where

it can suggest content that you're interested in based on certain key-words. Another example is Buffer which allows

users to create a posting schedule that is based on updates from within your network or your followed accounts. In addition to

these tools, newsfeeds such as Curata, Feedly, dlvr.it, and Scoop.it can also be used to curate content and share the information. Now to automate the curated content from these news aggregators, you can utilise a service like IFTTT by creating a 'recipe' that makes all starred or saved posts get added to a social media automation tool such as Buffer. The starred or saved post on Feedly will then get queued up on Buffer to be posted on the chosen social media platform. 📌

With the help of a content aggregator and tools such as IFTTT, you can automate posting relevant content from other websites on your social media
