

Realme Watch S launch

With a 1.3-inch display and multiple heart rate monitors, the smartwatch is set to launch in November. <http://digit.in/nov20-53>

Nokia - Back to Basics

Nokia launches 2 basic phones with 4G VoLTE network support, in hopes of providing low-cost access. <http://digit.in/nov20-54>

Mi Watch Revolve

Almost perfect for the price

T

he Mi Watch Revolve is all about taking big swings at big names like FitBit,

Garmin and other Android Wear devices. The Mi Watch Revolve isn't about throwing every possible feature at you, but it does bring the most essential features to the table, along with a few extra features that make the watch feel like a really solid value for money proposition. Let's find out how it performed in our review.

Build

The Mi Watch Revolve has a 1.39-inch AMOLED display with a peak brightness of 450 nits. This is to make the content on the screen visible even in harsh daylight, and this feature works just as advertised. The sensors on-board are the usual suspects like a three-axis acceleration sensor, geomagnetic sensor, an ambient light sensor, but most importantly, a PPG heart rate sensor. The heart rate sensor might not sound super exciting, but things become very lucrative when you add to this FirstBeat Motion algorithms. FirstBeat is the company whose algorithms power many renowned wearables, including most of Garmin's devices. The Mi Watch Revolve uses a number of FirstBeat Motion's algorithms that allow the watch to calculate things such as VO2-Max, stress levels, energy levels and even better sleep tracking.

Features

When it comes to smart features, the Mi Watch Revolve offers plenty. The watch alerts you to your messages, alarms and you can even accept and reject calls on it. It also alerts you when you've been sitting too long and should be moving.

The company claims that the Mi Watch Revolve's 420mAh battery can chug along for up to 2 weeks without needing another charge. While we didn't quite get that number in our

usage, the Revolve did manage to run for 6 days of proper, smartwatch-esque use before needing another charge. The watch takes about an hour and a half to top up completely.

Performance

The Mi Watch Revolve tracks six key activities; all day heart-rate tracking, VO2-Max, Body Energy monitoring, stress monitoring and everyone's favourite, step counting. Within the work-out segment, the Mi Watch Revolve tracks ten different kinds of sports. You can track your runs, your bike rides, hikes, swims, and even indoor exercises.

We used the Mi Watch Revolve on my left wrist for a lengthy period of time and had my trusty Garmin Instinct on the other. Both watches were tracking the heart rate and other activities throughout the day which included several 5km walks, 10km bike rides and various flights of stairs. At the end of the day, the Mi Watch Revolve reported a resting heart rate of 92bpm while the Garmin has my resting heart rate pegged at 86bpm. The variance is well within the margin of error, leading us to believe that the Mi Watch Revolve is pretty decent at its all day tracking capabilities.

We tracked walks and bike rides and right off the bat, one thing that

was nice is that the Xiaomi Wear app separates your regular steps from the steps you take on "tracked walks." Besides that, the steps and distance recorded by the Mi Watch were just a little higher than those reported by the Garmin.

Similarly, for 10K bike rides, the distance reported by the Mi Watch Revolve was a solid 10.2 Km, while the Garmin Instinct reported a dot 10 Km. We measured the distance using a Garmin Edge 500 bike computer and while the Instinct was a lot closer to the actual number, the Mi Watch Revolve was close enough.

The Mi Watch Revolve was on a roll, checking off all the right boxes, but one area where it faltered was sleep tracking. The watch didn't record any sleep activity for the last several days, with the only record being of the reviewer sleeping two hours one night.

Bottomline

The Mi Watch Revolve is a big step up from the casual fitness bands that are available in the market. In that regard, the price on the watch is also much higher than that of such bands. For an introductory price of ₹9,999 till Diwali (and ₹10,999 after), the feature set it offers goes up against the much more expensive offerings like the Huawei Watch GT2e and even the far more expensive Garmin Instinct. The watch itself is fairly stylish and follows the standard watch strap sizes, should you choose to customise your watch. Honestly, for the price and performance, the Mi Watch Revolve is hard to not recommend.
