

ANIME

Yu Yu Hakusho

★★★★☆ | Yu Yu Hakusho Spirit Detective is a classic anime that first aired back in the early 90s. It is considered to be a masterpiece by many, and is definitely a must-watch for fans of shounen and fighting anime. This is a textbook shounen anime, with all the expected clichés. However, thanks to its great dialogue and plot, what you get ends up being something with enough depth to keep you gripped for all 112 episodes.

Animation will definitely feel dated for those who aren't used to older anime. However it's definitely worth a shot, plus if you're familiar with Dragon Ball Z's animation style, then the two are fairly similar. Considering

Dragon Ball Z actually started airing before Yu Yu Hakusho.

The gist of the story is that Yuusuke Urameshi, a 14-year old delinquent, does something incredibly out of character when he jumps in

front of a car to save someone. This act apparently confused the heavens so much, they didn't know what to do with him. So they sent him back with an opportunity to regain his life. He would have to take on the role of a Spirit Detective and assist a Death God named Botan, bringing evil on Earth to justice.

This brings us to the characters, who are easily the best part about the show. In-depth characters, each with something unique about them and they develop and grow on you as you continue watching the show. They don't exist solely to help the protagonist achieve his goals, but have goals and reasons of their own.

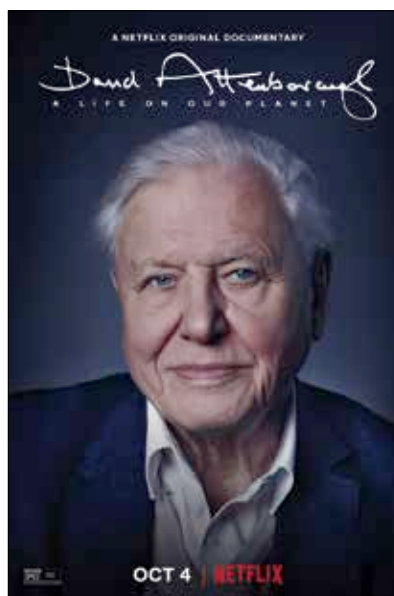

Overall, Yu Yu Hakusho Spirit Detective is an easy recommendation for fans of the Shounen genre and a timeless classic. While it's definitely old, (over 25 years old!) the story is still great, but the animation might feel dated. If you haven't already watched this, you definitely should.

TV SHOW

David Attenborough: A Life on Our Planet

The best nature documentaries often start with a wide shot of a picturesque and serene scenery that is soon punctuated by the clear and received pronunciation of Sir David Attenborough. The 94-year old historian has had an illustrious career spanning more than six decades and his documentaries have helped countless folks to experience and enjoy the beauty of nature. One could almost say that his documentaries only present part of the picture as you've always seen the most pristine form of nature.

Sir David Attenborough has been criticised over the years for this very practice as nature depicted in his documentaries

don't shed light on the heinous impact that humanity has had on it. How the earth has slowly lost more and more of its precious green cover to make way for concrete jungles that have displaced countless hordes of animals and brought many species to the brink of extinction. A Life on our Planet, is a means to portray

this very impact and Sir David Attenborough terms it a "witness statement". Who better than him to take us through the devastation than humanity has wrought. After all, he has had a front-row seat for the last 94-years.

The documentary starts off with Sir David at the site of the Chernobyl nuclear disaster, one of the most disastrous man-made accidents. And as the camera zooms out, we are made to realise that nature has the resilience to bounce back from the worst that we can do. He then takes us through similar scenarios wherein man has near-permanently destroyed natural ecosystems across vast geographies. And the best part is that he even provides a solution to tackle each crisis.

We usually end our reviews by stating who'd likely enjoy the movie, anime, TV show or comic that we're reviewing. However, this documentary is one that should be viewed by all. We all need a wake up call before things hit the fan and if this doesn't do it for you, then you probably don't have a heart or a brain or an iota of empathy for humanity's sins.
