Realme Smart Cam 360

Realme has been expanding its IoT repertoire for a while now, and one of the latest products to enter its IoT portfolio is the Realme Smart Cam 360. This is Realme's first security device, and is essentially an entry level security camera for those looking for an affordable home security solution. The Realme Smart Cam 360 comes equipped with a host of surveillance features. For starters, it can record video footage in both 480p and 1080p resolution. It supports two-way voice real-time calling. The camera supports microSD cards up to 128GB, it unfortunately has no cloud storage support.

It can record non-stop for 24 hours, and you will need the companion app, 'realme Link' to set up and control the camera, or share the screen.

In terms of aesthetics, this is a pretty nice looking camera made out of high-quality plastic. It is not dust or water proof though, so if you're planning on keeping

this outdoors, keep that in mind. The microSD card slot is located right under the lens, and at the back you have the speaker for two-way comms. The microUSB port is located at the bottom along with the reset button. Setting up the Realme Smart Cam 360 is very easy, all you need is a working Wi-Fi connection at home. Additionally, the camera supports both vertical and horizontal installation, so it can be installed at a variety of locations without worry. The packing comes with clamps and screws you might need to install the camera. The camera is capable of human body detection and motion-tracking, it also has night vision thanks to an in-built infrared illuminator. Additionally, you can link the smart cam to multiple devices, so that they can all access the feed. The app also allows you certain features, such as being able to zoom in and control resolution. The Realme Smart Cam 360 is a great, feature-rich entry level smart security camera at an affordable price point.

PRICE: ₹2999

Nokia Media Streamer

Looking at the Nokia Media Streamer for the first time and you'd be forgiven for thinking it's a toy. It has an ice hockey puck-like design but slightly square. It has only 2 ports – a micro-USB port and a mini HDMI port. You get a mini HDMI to HDMI cable in the box which is generously long, letting you conveniently hide the device behind your TV. The Nokia Media Streamer comes with quite a chunky remote control. It has the standard slew of buttons from power, to Google Assistant, directional buttons, volume rocker, back, home, menu and a mute button. For OTT hotkeys, this one has Netflix and ZEE5. The Nokia Media Streamer works like any mid-range Android TV. It supports dual-band Wi-Fi, which is nice.

Running on Android, you have access to the Google Play Store with apps such as Netflix, Prime Video, ZEE5, Disney+ Hotstar and many more. The streaming apps load fast, play content fast (as fast as your internet will allow). It's easy to customise the home screen with your favourite apps and even services such as Plex and Kodi work fine, if that's something you are into.

When it comes to the world of streaming content and making your TV smart, the sky's the limit, or rather, the depth of your pocket is the limit. The Amazon Fire TV Stick is one of the most popular devices in the market and the new 3rd gen one supports 1080p, HDR and Dolby Atmos. It is priced at ₹3,999.

In contrast, the Nokia Media Streamer supports 1080p and HDR but without Dolby Atmos and is priced at ₹3,499. Both devices are available cheaper online as of writing this story. We also have devices such as the Mi TV Stick which is a lot cheaper than these 2. We also have the Mi Box 4K giving you access to 4K HDR content. So, it honestly boils down to your preference. If you like the Android TV UI, then you can consider the Nokia Media Streamer.
