

DOES THIS SECTION EVEN NEED AN INTRODUCTION? FROM COMPUTERS TO MOBILES, AND HEADPHONES TO GPUs, IT'S ALL HERE...

THIS MONTH IN TECH:
We explore the best features of iOS 14 and Android 11. In Level Up we give you some tips and tricks for WhatsApp. In Deworx we tell you how to make your website accessible to everybody and in Teardown we take a look inside the iPhone 12 Pro Max

AMD launches Radeon RX 6000 graphics cards

AMD has launched their new 'RDNA 2' powered Radeon RX 6000 graphics cards in the high-end segment. While the cards are very competitive in performance as well as pricing in US markets, Indian prices for the 6800 XT are quite horrible.

WHAT'S NEW

Xbox Series X and PS5 sales affected by poor stocks

The latest generation of gaming consoles have been severely affected by poor stocks. Analysts have predicted that the Sony PS5 will outsell the Microsoft Xbox over time but as it stands now, stocks for both consoles are abysmally low across all markets. The Covid-19 pandemic has obviously affected production cycles for a lot of consumer products but there are more reasons for the low stocks aside from the pandemic. IDC's research director on gaming, Lewis Ward has stated that profit margins on the PS5 and Xbox Series X are probably "thin and even outright in the red" so the companies are likely to

have set production limits as well to avoid revenue losses had there been unsold stock. The two consoles

will supposedly be supply constrained into the next year. Another possible reason is the fact that the new consoles are powered by AMD's silicon which is also supply constrained owing to demand for their new Zen 3 processors and Radeon RX 6000 graphics cards.

Apple to pay another \$113 million for "batterygate"

Apple has reached a settlement in an investigation into the "batterygate" scandal wherein the company intentionally slowed down their iPhones with their software updates. The lawsuit involved 34 US States whose attorneys argued that Apple fully understood that by concealing the issues, it could spend a year profiting off of people who believed that they needed to buy a new iPhone when all

they required was a battery replacement. The company claims this was done to prevent

the phones from randomly shutting down as the battery aged. Consumers, in class action lawsuits, have claimed that the company did this to force customers to upgrade to newer smartphones each year. This settlement is the latest

that the company has agreed to. Apple had settled another class action lawsuit in March this year to the tune of \$500 million wherein the company faced the same allegation. A month prior to that settlement, Apple had been fined by a French competition watchdog for \$27 million for intentionally slowing down their phones and not informing the consumers about the same.
