## Smart cameras and baby monitors vulnerable to hackers

**A**ccording to British security experts, baby monitors and wireless smart cameras are at risk of being hacked by cybercriminals. With the increased popularity of internet-connected smart cameras and monitors, there could be an increase in the number of security flaws, meaning hackers could get their hands on sensitive videos and images. One such example was a video that surfaced online showing a hacker speaking to a nine-year-old child via a video monitor. The National Cyber Security Center has urged users to keep changing their passwords, update security software and disable remote internet access if it is not being used. These smart cameras can easily be used for nefarious purposes such as sending data to big tech companies or leak data to hackers.

## MOBILE WATCH

## Realme 7 5G

**T**he Realme 7 5G has made its global debut bringing 5G to the Realme 7 series. The Realme 7 5G offers a high refresh rate and has quad cameras on the back. A report by Smartprix states that the Realme 7 5G will likely launch in India sometime in December. Realme 7 5G features a 6.5-inch Full HD+ (2400 x 1080 pixels) resolution display that has a punch-hole cutout in the top-left corner and supports 120Hz refresh rate. Alongside the MediaTek Dimensity 800U CPU, the phone comes with a Mali-G57 GPU and is paired with 6GB RAM and 128GB storage. The quad-camera setup on the back consists of a primary 48MP camera, an 8MP ultra-wide lens, a 2MP macro camera, and a 2MP depth sensor. On the front, there is a 16MP selfie camera. The phone has a side-mounted fingerprint reader and is equipped with a 5,000mAh battery with support for 30W fast charging out-of-the-box.

## APP WATCH

## GameOn

**S**amazon recently launched GameOn, a gaming service app that allows mobile gamers to capture and share short gameplay clips. This social network app for mobile gamers allows users to record 30 seconds to 5 minute clips within mobile games.

The company has stated that over 1,000 mobile games will be supported by GameOn at launch including popular ones such as PUBG Mobile, Clash Royale, Angry Birds 2, Among Us, and many others. The clips that are captured

are stored on the user's device itself and can be edited within the app and then shared directly on to a user's GameOn profile page. Users can also

add commentary and on-screen captions to the videos to give it a more personal touch.

In addition to sharing their short gameplay clips, mobile gamers can also participate in a number of chal-

lenges. GameOn's homepage houses a bunch of challenges in the Featured Challenges section. Users can participate in these challenges by submitting their own video clips, and the most voted clips will receive a digital badge of honour.

One example of a challenge on this platform is asking players to win a game of PUBG Mobile where the play-zone is so tiny that you can see the perimeter of the entire circle on the screen. GameOn is currently available only for users with Android devices, however, it is indicated that the app will be making its way to the iOS App Store soon.

### Olauncher

Olauncher is a minimalist launcher which offers lesser customisation options than others.

Its whole premise is being a clean, relatively bloat-free launcher that is entirely free of ads. The app is also open-source.

### My Income

This is a simple finance tracker where users can input how much money they make, expenditures, and see a detailed log of all your spendings. It's a great app for budgeting and it supports over 200 currencies.

### SideSqueeze+

This is a unique Android app that adds the ability to squeeze the sides of a smartphone as a command, much like older Pixel devices. The app includes seven detectable squeeze types and three detectable press types.
