Teardown: Apple iPhone 12 Pro Max

A whole lotta smartphone with a nostalgic form factor

Dhriti Datta | dhriti@digit.in

Prying open the iPhone 12 Pro Max

The iPhone 12 Pro Max, much like most modern-day glass front and back smartphones, can be taken apart by applying some heat and suction. The largest iPhone of 2020 has the A14 Bionic SoC with a fourth-gen Neural Engine, a 6.7-inch Super Retina XDR OLED display, a triple camera array with a LiDAR module, 6GB of RAM and 128/256/512 GB of internal memory, and 5G connectivity (both sub-6GHz and mmWave).

Diving into the triple camera array

The iPhone comprises of three rear cameras include a 12MP wide-angle lens with an f/1.6 aperture, a 12MP ultra-wide lens with an f/2.4 aperture, and finally a 12MP telephoto lens with an f/2.2 aperture. The primary wide camera has a 47 per cent larger sensor than the regular iPhone 12 and iPhone 12 Pro models. Since it is still 12MP, like the iPhone 12, the larger sensor means that each pixel is larger and captures more light information. This camera also comes with a sensor-shift image stabilization technology which is often used in some DSLRs and mirrorless cameras.

Larger loudspeaker and Taptic Engine

The Taptic Engine and loudspeaker of the iPhone 12 Pro Max can be unscrewed from the body. Both the Taptic Engine and the loudspeaker inside the 12 Pro Max as visibly larger than the ones inside the iPhone 12 mini. This definitely will equate to a louder speaker, which is great for multimedia consumption, and possibly, better haptic feedback.
