

Apple M1 Chip

Here's everything you need to know about Apple's latest, Arm-based M1 chip. <https://digit.in/dec20-95>

Cyberpunk 2077 Multiplayer

CD Projekt Red has stated that Cyberpunk 2077's multiplayer mode will be an almost standalone game. <https://digit.in/dec20-96>

A look at the MagSafe ring

One of the headlining features of the iPhone 12 lineup in 2020 is the MagSafe 15-watt wireless charging. An X-ray of the phone reveals the MagSafe ring within the phone, that seems to fit inside quite comfortably as opposed to the iPhone 12 mini. You can also see this ring with magnet paper, as you must have already seen in many YouTube videos.

Apple iPhone 12 Pro Max

The L-shaped battery

Moving on from these components, the iPhone 12 Pro Max's battery can now be accessed via the battery adhesive tabs. The battery is L-shaped and it comes in at a respectable 14.13Wh which is significantly larger than the Mini's 8.57Wh and the 12 and 12 Pro's 10.78Wh. However, it lags behind the iPhone 11 Pro Max from last year (15.04Wh), and definitely falls behind the Samsung Galaxy Note 20 and Note 20 Ultra's batteries (16.69Wh and 17.46Wh respectively). Nevertheless, the A14 Bionic SoC is touted to be pretty power-efficient, so the battery life is not going to disappoint most users.

The mainboard

The mainboard of the biggest and (not) baddest iPhone of 2020 comprises of the A14 Bionic SoC layered over 6GB of memory. It also comes with 128GB of Kioxia NAND flash memory, ST Microelectronics STB601A power management IC, Qualcomm's SDR865 5G and LTE transceiver, SDX55M 5G modem-RF system, and SMR526 intermediate frequency IC, USI 339S00761 WLAN / Bluetooth module, Murata 1XR-482 mmWave front-end module and more. It's quite a crowded motherboard, but pretty neat nevertheless.
