Back in 2017, Sony entered the OLED ring with the launch of the Sony A1 OLED TV. It's 2020, and we now have Sony's flagship OLED TV for the year, the A8H. While the TV has a design which has evolved over the years, it also has the evolution of Sony's technology with OLED panels, Triluminos Display and Acoustic Surface audio. Put simply, this is one of the best TVs for a cinematic viewing experience. Let's find out why.

Build and design

The Sony A8H has two separate feet to hold the TV in place, and the TV can be mounted on a table in two positions. It can sit flush with the tabletop or it can be propped up a little, giving you some space to put a soundbar or set-top-box below the TV. The display is super thin as we have seen with all OLED TVs.

For connectivity, the A8H has one HDMI port, two USB ports, headphones and video in on the side. At the back, in a small cavity, we have three HDMI ports, one USB port, optical, LAN and a good old antenna.

Performance

Straight off the bat, the one thing to notice is that the TV doesn't get as bright as the Sony Z8H. But that is an LED TV. This is an OLED which

means it has deeper blacks and more vibrant colours from the get-go. In fight sequences which take place in the night, the TV can handle dark and bright areas quite well, thanks to the OLED's self-illuminating nature.

So, is there anything lacking? Well, it is an OLED panel at the end of the day which means, when consuming content in the daytime, the panel can get reflective. Nevertheless, the viewing angles are great and even at a wide-angle, you can consume content with ease and accurate colours.

Coming to FHD performance, shows like *Young Sheldon*, which have a bright colour pallet, are a treat to watch on this TV. They are presented in a vibrant tone that one can enjoy.

Moving on to gaming, We played *Spider-Man: Miles Morales* and *Dirt 5* on this TV and the experience was good. Both the games run at 30 FPS in fidelity mode (for *Dirt 5*) and the game-play was fun. Input lag was minimal and the colours in these 2 games deserve special mention.

Audio

Sony's Acoustic Surface Audio has evolved over the years and one of the key areas of change here is in the bass

and channel separation. Look at *Ready Player One*, the first big race at the 13-minute mark. It has cars whizzing past the screen and not only is the left to right channel separation noticeable, but you can also hear the bass when *King Kong Starts* attacking the cars.

Things like vocals and channel separation are one of the highlights of the TV. Characters talking to each other on the left and right side of the screen exhibit clear channel separation. The TV can also get quite loud considering its mere 30W output on paper.

Remote control

The remote on this TV doesn't have backlighting found on the Z8H. It has the same textured back, for grip, dedicated buttons for Netflix and Google Play, playback controls and more. It has a traditional design with access to a number pad.

Verdict

OLEDs are the pinnacle of content consumption and a cinematic experience, and the Sony A8H delivers on this front. It has fantastic picture quality as far as 4K, HDR, Dolby Vision, SDR and FHD content are concerned. It has good sound output as well. Android has evolved to a point where it isn't a laggy experience any more. What the TV doesn't have going for it is HDMI 2.1 features like 4K at 120Hz or VRR, which can be a downer for those looking to invest in a next-gen console and GPU proof TV. The peak brightness, though not as high as the Z8H, is still bright enough to enjoy HDR content.

—Sameer Mitha

SPECIFICATIONS

PANEL SIZE: 65-inch (available in 55-inch as well) |
PANEL TYPE: OLED | Panel RESOLUTION: 3840 x 2160 - 4K
| PANEL REFRESH RATE: 60Hz at 4K (120Hz at 1080p) |
