

Redmi Note 9 5G Series

Xiaomi has launched Redmi Note 9 5G series for China; Pricing and Specification details here. <https://digit.in/dec20-47>

Vivo V20 Pro launch

With a 44MP dual-selfie camera and Snapdragon 765G, the phone is set to launch on 2 December. <https://digit.in/dec20-48>

Xiaomi Mi 10T Pro 5G

Value for money purchase under 50K

The Mi 10T and the Mi 10T Pro, doesn't really succeed the Mi 10. Instead, Xiaomi hopes that if the choice is between a high refresh rate display and a cutting-edge camera, users don't have to look too far or go too deep into their wallet. The Mi 10T Pro combines a 108MP camera with a 144Hz refresh rate display, hoping it is exactly what the doctor ordered in the high-end segment. Let's see how the phone fares in our review.

Design and display

The Mi 10T Pro is a radical change from the Mi 10, in terms of the design. While the Mi 10 had a curved display, the Mi 10T Pro sticks to a flat panel, with a side-mounted fingerprint sensor and a thick, protruding camera module. The rear glass panel is just as glossy and smudge-prone as before. Still, the Mi 10T Pro grips well thanks to the rounded corners. There's no official IP-rating on this one though, and the phone wobbles on a flat surface.

The 6.67-inch display on the Mi 10T Pro steals the show. Despite switching to an LCD panel to enable the higher 144Hz refresh rate, the panel has not lost any of its charm. In fact, it feels more responsive, and the colours a lot more vibrant than the Mi 10. The refresh rate adjusts based on what you are doing on the screen, which is pretty neat and saves a lot of power.

Software

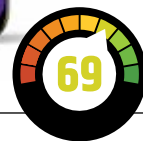

The Mi 10T Pro runs on MIUI 12, and it's a big leap forward from MIUI 11. MIUI 12 comes with some intuitive, useful features, fluid animations and interactive live wallpapers. However, it's still a work in progress. Things like the system-wide dark mode tends to invert colours in apps like Google Meet, Instagram and even on the Google Discover app.

Price
₹39,999

Battery life

The Mi 10T Pro packs a large 5,000mAh battery with 33W fast charging support. That's enough to keep the phone running for the most part of the day, even with heavy usage and 144Hz refresh rate enabled. The smartphone gave a decent 8 hour screen-on time, when used as a daily driver, which is good enough to take you through the day.

Verdict

The Mi 10T Pro might just be the best buy if you have a budget of ₹40,000. No other smartphone offers a 108MP camera, a 144Hz display and the Snapdragon 865 at that price, and that's precisely what makes the Mi 10T Pro hard

Performance

The Mi 10T Pro runs on the Snapdragon 865 coupled with 8GB LPDDR5 RAM and 256GB UFS 3.1 storage. During daily use, there's almost no delay in launching first apps like the camera, and even third party apps like Adobe Lightroom and Call of Duty Mobile.

The benchmark scores peg the Mi 10T Pro to be at par with other Snapdragon 865 flagships. It scores high on AnTuTu primarily because of using the latest RAM and storage modules. Coming to gaming, we clocked a 15 minute session of Call of Duty: Mobile using GameBench, and the Mi 10T Pro easily hit the 60 FPS mark with all graphics settings maxed out, with 100% stability.

Camera performance

The Mi 10's success was primarily because of the camera, but the Mi 10T Pro can't lay claim to that. The 108MP camera primary camera isn't leveraged as well as the Mi 10, and the rest of the cameras in the quad-camera setup are

to ignore. You get tremendous value for money, even though you may not get the best flagship experience. The camera is one big area that needs a lot of improvement. Nevertheless, it's certainly a competent smartphone, if you look past a few of its weaknesses.
