OnePlus 8T

Hit and miss

With the Pro Model largely absent from this year's fall lineup for OnePlus, all eyes are on the OnePlus 8T, which seems to sit cozily between the OnePlus 8 and the OnePlus 8 Pro. It borrows quite a few features from the OnePlus 8 Pro, including the primary camera sensor and the display, but also adds new things like 65W fast charging and UFS 3.1 storage. With the OnePlus 8T Pro not seeing the light of the day, the onus on the OnePlus 8T to prove itself in the market is a lot higher. Can it succeed? Let's find out.

Design and display

The OnePlus 8T saw big changes in the design. It is now more in line with the OnePlus Nord's design philosophy. OnePlus switched to a glossy glass finish and used a broader camera module. The frame is built out of aluminum and feels quite resilient. The phone is also as heavy as the OnePlus 8 Pro. The screen is now flat, and shows no glare or colour shift along the edges. Sadly, the OnePlus 8T is not water resistant like the OnePlus 8 Pro.

Speaking of the display, this really feels like the best panel we have seen on a OnePlus device. The 6.55-inch AMOLED display is tuned to produce bright and saturated colours with deep blacks and high contrast. Using the phone in Dark Mode is a charm, and watching HDR videos on YouTube is just as charming. The panel is also ideal for gaming as the touch sampling rate can hit a claimed 240Hz.

Software

The OnePlus 8T did give us a chance to explore the new OxygenOS 11 to its fullest, and that's the real charm of using the device. There are improvements across the board, some incremental and some game-changing, like the Always-on display, which we enjoyed quite a lot.

Performance

With OnePlus opting out of the speed-binned variant of the Snapdragon 865, the benchmark scores of the OnePlus 8T remain largely the same as its predecessor. Interestingly, the OnePlus 8T goes back to using LPDDR4X RAM, instead of LPDDR5 used on both the OnePlus 8 and 8 Pro earlier this year. Thankfully, the real world performance is reassuring. The phone boots up, unlocks and launches apps with blazing speeds.

OnePlus flagships have always offered excellent gaming experience and the OnePlus 8T is no different, and unlike the OnePlus 8 Pro, doesn't heat up excessively. We tried our hands on a few rounds of Call of Duty: Mobile's Team Deathmatch, and the game ran at 60 FPS at 100% stability, and it only got slightly warm after three matches.

Camera performance

With the OnePlus 8T in place, we now have three OnePlus smartphones using the same 48MP camera sensor, including the OnePlus 8 and the OnePlus Nord. The camera performance, as a result of the hardware, isn't anything

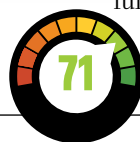

groundbreaking. The overall sharpness, including the center and the edges are uniformly good, and the dynamic range is just shy of what the 8 Pro can produce with its larger sensor.

The ultrawide lens outputs sharp photos given ample light. The good thing is that the ultrawide lens now works with the Nightscape mode, and there's a definite improvement in using the lens in lowlight. The macro camera seems to have some focus issues though.

Battery life

The battery is where the OnePlus 8T will put all other OnePlus flagships to shame. The 8T embraces hyperfast 65W fast charging, and what an impact it makes! You will anyway have trouble draining the 4500mAh battery. The total time it takes to charge the phone to full capacity is just over 30 minutes.

Trust us, it's a game-changer.

Verdict

With one of the smoothest displays, hyperfast charging, and a premium design, the OnePlus 8T offers almost everything one wants from a smartphone in 2020. Only the

camera holds it back from challenging the stalwarts in the market, even its own Pro sibling. What it does offer is one of the best value for money devices out there. The OnePlus 8T is perfect if the camera is not the highest priority, but gaming, watching movies and speedy usage, is.
